

BARA-KADE C&D is a randomly sized, high quality Wyoming sodium bentonite designed as a sealant for ponds, lakes, reservoirs, and other stationary waters. BARA-KADE C&D is a mixture of powder, granules, and small chips. This random consistency strikes a balance between the easy homogenous blending of powders and the clean handling of granules and chips during integration of BARA-KADE C&D into soils and other backfill materials. It exhibits extremely low permeability and has a high swelling capacity.

| | Specifications |
|---|----------------|
| Moisture, % | 12.0 Max |
| Bulk Density (compacted), lbs/ft ³ | 72 |
| Specific Gravity | 2.7 |

Directions for Use

Depending on the soil type, typical usage rates can be between 2 and 5 lbs/ft².

Packaging

BARA-KADE C&D is sold in 50 lbs. and bulk bags and can ship from our Lovell and Colony, WY plants.

Applications/Functions

- Sealant for ponds and water bodies
- Wastewater liners
- Hydraulic barriers
- Geo-construction sealing

Advantages

- Combination of powder, granules, and chips
- Low permeability, high swelling
- Loose bulk loading available
