

ENVIRO-TROL™ is a modified sodium bentonite produced in granular form from reserves in Wyoming. ENVIRO-TROL is engineered by dry processing the bentonite with a quaternary amine resulting in a hydrophobic material.

ENVIRO-TROL provides adsorption of a wide array of organic contaminants and has applications in a range of environmental remediation projects. The granular form is easier to handle than powders allowing for more accurate dosing and limits nuisance dust.

Property	Specification
Moisture, %	5 Max
Bulk density (compacted), lbs/ft ²	65
LOI, %	31 - 36
Solubility in water	Insoluble
Oil adsorption	0.5 Minimum
Screen sizing	Available upon request

Packaging

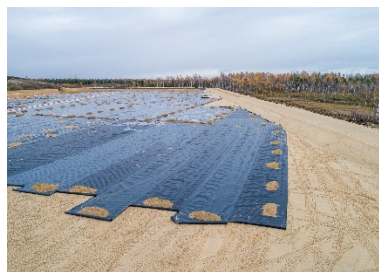

ENVIRO-TROL is available in 50 lb. bags and can ship from our Colony, WY or Malvern, AR plants.

Applications/Functions

- Water treatment
- Remediation
- Filtration
- Sediment capping
- Solidification
- Geosynthetic clay liners (GCL)

Advantages

- High adsorption capacity
- PFOS/PFAS/Organics reduction
- Environmentally friendly
- Naturally occurring clay
