

# ORGANOCLAYS

Modified  
CLAYS

**ORGANOCLAYS** are modified sodium bentonites (clay) manufactured by mixing a quaternary amine resulting in a hydrophobic material. Organoclays are widely used in several industries and serve as viscosifiers and thickening agents.

BPM offers a suite of organoclays under the **ORGANOTROL™** brand. The ORGANOTROL products were engineered to eliminate the need for chemical activators and are easy to disperse and rapid yielding. BPM applies industry-leading expertise and technology to engineer solutions across multiple organoclay applications.

**Private Label Services** are available for organoclays by BPM.

	Moisture, %	LOI, %	Usage
ORGANOTROL 2000	4 Max	35 Min	Oil field, emulsions
ORGANOTROL 2200	4 Max	38 Min	Oil field, emulsions
ENVIRO-TROL™	-	-	Remediation, PFOS/PFAS
AGRI-TROL	-	-	Feed additive

## Applications/Functions

- Oilfield Drilling Fluids
- Oil removal from water
- Paints, coatings, & inks
- Grease Lubricants
- Cosmetics
- Remediation
- Agricultural feed additives

## Advantages

- Hydrophobic
- Viscosifier
- Maintains suspension over wide range of temperature
- Thickening Agent
- Anti-Settling Agent
- Rapid dispersion and yield
- US made
- Private label services available

## Packaging

ORGANOTROL, ENVIRO-TROL, and AGRI-TROL products are available in 50 lbs. multiwall paper bags. Manufactured in the United States.
