

Water Hardness Test Strips

Description

Water Hardness Test Strips measure calcium, magnesium and other metals that contribute to hardness and can cause scaling on equipment.

Application

Before an effective chemical treating program can be implemented to control the scale, the amount of these metals must be known.

These test strips measures water hardness in water and water-based drilling fluids.

Advantages

- Fast, reliable results
- Portable, easy to use in the field
- Safe and disposable

Properties or Specifications

Measures hardness concentration

0 to 25 grains per gallon (0 - 425 mg/L)

Ordering Information

Part No. 210151—Total Hardness Test Strips, 50 per package

Fann Instrument Company offers a complete line of equipment, materials, and supplies for analyzing various drilling fluids and oil well cements in accordance with API Specifications and API Recommended Practices.
