Abranet® Yellow

Abranet® Yellow offers painters a healthier and more productive workday by enabling effective dust-free sanding. This net-based abrasive is designed for hand and machine sanding of ceilings and walls. It comes in two formats and three grit options, covering everything from heavy material removal to fine surface finishing.

The key to Abranet Yellow's excellent wall and ceiling sanding properties is the well-balanced combination of softness and the fast-cutting net structure. The abrasive is soft and flexible enough to provide even, controlled sanding with an electric sander or hand sanding, while the net design ensures efficient material removal and excellent dust extraction.

Perfect For Walls and Ceilings

Abranet® Yellow is especially well-suited for long-neck sanders, such as the Mirka® LEROS, making it an ideal choice for fast and efficient wall and ceiling sanding. It performs exceptionally well with random orbital and rotary wall sanders, offering smooth compatibility across various sanding machines. Its flexible net construction also makes it suitable for hand sanding blocks, the DecoSander, and manual use – providing painters with a reliable, dust-free solution for large surfaces and detailed areas.

Dust-free, with every tool

Thanks to its net abrasive construction, Abranet Yellow ensures superior dust extraction across all applications. Use it confidently with:

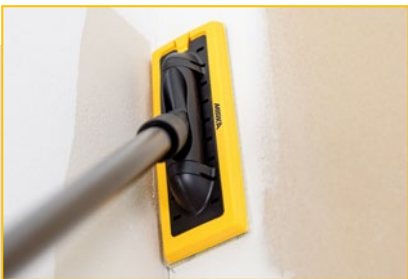

- Long-neck sanders (e.g. Mirka® LEROS or LEROS-S, 225 mm)
- Pole sanders and manual sanding blocks (e.g. DecoSander 225 mm/80 x 230 mm, Handy 80 x 230 mm)
- Manual hand sanding for edges and detailed areas

The Painter's Abrasive

Designed for wall and ceiling work. Abranet® Yellow was made with painters in mind – whether you're sanding high walls with a long-neck sander or smoothing details by hand, it adapts to the job.

Soft where it matters – strong where it counts. The flexible backing conforms to contours and corners, while staying firm enough to prevent over-sanding and ensure control.

Comfortable grip, effortless handling. Whether used by hand or machine, Abranet Yellow is easy to hold and helps reduce fatigue during long sanding sessions.

Three grits. Endless possibilities. Coarse, Medium, and Fine – a simple system that covers every step from material removal to surface prep.

Exceptionally edge-wear-resistant. It's designed to withstand contact with screws, nails, and uneven surfaces, making it well-suited for renovation sanding. The durable construction ensures reliable performance even in demanding areas, such as corners and patchwork sections.

Technical Specification	Abranet® Yellow
Bonding	Low VOC resin system
Coating	Closed
Grain	Aluminium oxide
Backing	PA net
Colour	Yellow
Grit Range	Coarse, Medium, Fine

Choose Your Format

Sheet
80 x 230 mm

Disc
225 mm

Pick Your Grit

Fine is ideal for soft filler and final surface preparation.

Medium is the all-round option, suitable for most surfaces and tasks a painter may encounter.

Coarse is designed for rough substrates, such as plaster patches and textured surfaces.
