

Simple connectivity.

Now with:

**Clean
connect.**
WiFi enabled

Know what's happening without being there.

Dishwashers, glasswashers and utensil washers play an essential role in busy kitchens and bars. When they're running well, service flows. When they're not, everyone feels it.

Clean Connect lets you see what your Classeq machines are doing – making it easier to stay on top of wash quality, efficiency and machine maintenance across your sites.

WiFi connectivity and access to the Clean Connect portal is available across the full range*. It's connectivity built for real day-to-day operations.

Quality wash results

See if your team are running drain down, refresh and deep clean cycles. Regular cleaning supports consistent wash results and helps protect the machine.

Energy efficiency

Compare machine operating hours with powered hours to spot easy savings (standby mode helps too).

Just add the salt

Hard water causes limescale which damages dishwashers. Monitoring cycles without salt helps you act early and avoid problems down the line.

Plan your services based on usage, not time

Wash cycles clock up like mileage on a car. Plan preventative maintenance around real usage to keep machines performing and maximise their lifespan.

Clean connect.

WiFi enabled

Simple. Robust.
CLASSEQ

*WiFi connectivity is available on all models manufactured after the 1st February 2026. The Classeq Bluetooth App is required for Wi-Fi set-up.

Who's it for?

Clean Connect adds value to any operation.

Your machines deliver great results as standard – connectivity adds more, helping you manage standards, support your team and maximise the performance and lifespan of your machines.

Monitor all machines across your estate

Whether you have one site or hundreds, Clean Connect allows you to check machine status across locations in one simple portal, then drill into the detail when you need it.

One site, multiple machines

Even small sites often have two machines – one in the bar, one in the kitchen. Clean Connect makes it easier for managers to keep an eye on both. Scale that up to large hotels, resorts, stadiums and office complexes and the value quickly becomes significant. From a single portal you can make sure all your machines are operating well.

Service and maintenance

Whether you have one site or locations nationwide, allowing your service partner to monitor your machines will enable them to plan in maintenance around real usage, maximising the performance and lifespan of your machines.

Rental and leasing

If you rent or lease your machines, Clean Connect can help you and your supplier monitor usage, track rental wash cycles and schedule servicing.

Your Classeq machines
are now visible from
Liverpool to London,
Brighton to Belfast
& Cardiff to Cambridge.
