

# The new (and improved!) Ooni pellets

You may have noticed a change  
in our pellets recently...

## So, what's new?

- All UK/EU pellets are now sourced from Scotland, keeping the supply chain close to home.
- Hardwood is out (slow to grow); softwood is in (grows quickly and abundantly in the UK).

## It's more sustainable this way:

- Pellets don't have to travel far.
- Materials are sourced from FSC-certified sustainably managed forests.
- Softwood trees regenerate faster.

## Is anything the same?

- Pellets still perform at the same high level as before.
- Energy output is as robust as ever.

## Bonus!

- They also leave less ash in the fuel tray.

**Ooni softwood pellets are ENPlus A1-accredited, the new standard for softwood pellets. Which means they're:**

- Clean
- Additive-free
- Food safe

## Won't any old pellet do?

- Not exactly. Protect the safety of your food by only using ENPlus A1-accredited softwood pellets.
- Hardwood pellets still work perfectly well, of course.

## The logs, too?

- Only pellets are getting an update; kindling and logs should **always** come from hardwoods.
