Company Description

tado° is the European leader in intelligent home climate management. As the only cross-manufacturer platform, tado° Smart Thermostats and services connect with any kind of heating or cooling system. Customers benefit from energy-saving technology such as Geofencing and Open Window Detection, as well as from remote heating diagnostics. Founded in Munich, 2011, and with 180 employees, tado° reshapes the way energy is consumed for more comfort, savings, and wellbeing at home. www.tado.com

Energy solutions

The heating and cooling of buildings is one of the main global consumers of energy and sources of carbon emissions. In Europe, heating and cooling in buildings and industry accounts for half of the continent's energy consumption, making it the biggest energy end-use sector ahead of transport.

The company focuses on intelligent home climate management and offers several solutions for consumers and businesses. This includes smart thermostats and AC controls for consumers, and SaaS products for energy utilities and heating service companies. As a cross-manufacturer solution, tado° works seamlessly with any kind of heating or cooling system for all kinds of homes.

tado° is an integral part of the energy transition from centralised power distribution to user-centric virtual power plants. Managing a capacity of over 4GW of energy, tado° is equipped to maximise agile tariffs and demand response requirements for a more energy-efficient, sustainable, and smarter grid.

Furthermore, tado° offers remote diagnostics, preventive maintenance, and repair services of heating systems for users, energy utilities and heating services companies.
