

Optimizing Your DAF Process

Process Management for
Dissolved Air Flotation Systems

Be Right™

**Maintaining your DAF
system is priority #1, right?
Wrong.**

Be Right™

DAF Elements that Require Attention & Potential Problems:

1. Solids loading rate
2. Hydraulic loading rate
3. Regular testing
4. Probe/Analyzer maintenance
5. Chemical usage

Specific Operational Challenges

Influent
Variability

pH Control

Temperature
Fluctuations

Accuracy of
Online
Measurements

Specific Operational Questions

- What to measure – and why?
- Where to measure it?
- Is a shift or daily grab sample good enough?

Hint: It is not

- Is my system running as designed?
- Is my instrument giving me correct readings?
- What do I do with the data?
- Do chemical and/or power savings matter?

Hint: Absolutely

Typical DAF System Process Operation

Overloaded system

Lack of true understanding of DAF process conditions

Ongoing reliance on individual operator knowledge/experience

Process
Operation

Process
Optimization

Determining DAF Efficiency – The Manual Approach

Decreasing
effluent
turbidity

Sludge cake
accumulating in
back 1/3 of DAF

HEALTHY

Thick Sludge Cake

Low turbidity

Determining DAF Efficiency – The Manual Approach

Minimal change in
effluent turbidity

No sludge cake

High turbidity

UNHEALTHY

Thin
Sludge Cake

High turbidity

We Can Help

Be Right™

How Can We Help?

**Rugged online instrumentation
for industrial processes**

**Real-time
monitoring**

**Automated
process control**

1

Rugged Instrumentation

Rugged Instrumentation

Total Suspended Solids (TSS) / Turbidity Monitoring

Solitax sc Sensors

TSS sc Sensors

pH Monitoring

Digital Differential pH & ORP Sensors

Organics (TOC) Monitoring

BioTector B7000i Online TOC Analyzer

Getting the Job Done in the Dirtiest Environments

**Self-Cleaning
Wipers**

**Humidity
Sensors**

**Multiple
Detectors**

Real-Time Monitoring

Be Right™

Real-Time Monitoring

24/7 Process Visibility

Instrument Health Monitoring

Resource Savings

- Chemicals
- Labor

Reduce downstream
treatment costs

Identify product loss

Universal Controller

sc1000

Standard Features

- Highly configurable
- Up To 8 Sensors
- Plug And Play Functionality
- C1D2 Certification
- NEMA 4x/Ip66
- 4 Relays
- Up To 12 mA Outputs
- Up To 12 mA Inputs
- SD Card For Data log And Configuration
- Networking
- Allows Up To 32 Devices Per Network

Communication Options

- Modbus Rs232/Rs485
- Modbus TCP/IP
- Profibus Dp
- Hart 7.2

Knowing the
Process is a
Good Start,
But...

Automated Process Management

Be Right™

Process Management

1. Collect real-time data
2. Calculate dynamic set points
3. Treatment adjusted – chemical feeds or aeration
4. Manual and automated modes available

RTC-DAF System Overview

RTC DAF Parameters=	Monitor	Manage
pH, Influent	Y	Y
pH, Effluent (optional)	Y	Y
NTU (TSS), Influent	Y	Y
NTU (TSS), Effluent	Y	Y
NTU (TSS), Float	Y	Y
Flow	Y	

RTC-DAF Input and Output Options

Inputs	
Influent Flow	Standard
Effluent Turbidity	Standard
Effluent pH	Standard
Influent pH	Optional
Influent Turbidity	Optional
Coagulant Flow Rate	Optional
Anionic Flocculant Flow Rate	Optional
Cationic Flocculant Flow Rate	Optional
Pre-DAF Acid Flow Rate	Optional
Pre-DAF Base Flow Rate	Optional
Post-DAF Acid Flow Rate	Optional
Post-DAF Base Flow Rate	Optional
5 Open Parameters	Optional

Outputs	
Coagulant Flow Rate Setpoint	Standard
Anionic Flocculant Flow Rate Setpoint	Standard
Cationic Flocculant Flow Rate Setpoint	Optional
Pre-DAF Acid Flow Rate Setpoint	Optional
Pre-DAF Base Flow Rate Setpoint	Optional
Post-DAF Acid Flow Rate Setpoint	Optional
Post-DAF Base Flow Rate Setpoint	Optional

RTC-DAF User Defined / Adjustable Settings

- Effluent Turbidity or TSS Setpoint (NTU or mg/L)
- Coagulant PPM dose
- Anionic Flocculant PPM dose
- Cationic Flocculant PPM dose
- Effluent Turbidity or TSS PID values
- Coagulant Specific Gravity
- Anionic Flocculant Specific Gravity
- Cationic Flocculant Specific Gravity

- Pre-DAF pH target value and range
- Pre-DAF pH PID values
- Post-DAF pH target value and range
- Post-DAF pH target value and range
- Minimum and Maximum Limits (flow setpoints, pump ranges, PPM or lb/ton, etc)
- Warning and Alarm limits for all measurements

Be Right™

The Benefits of Automated DAF Process Management

Be Right™

Benefits

- Automated chemical dosing
 - Eliminate manual adjustments
- Reduce operator interaction
- Optimize both solids and filtrate quality
- Consistent & cleaner effluent concentration
 - Reduced discharge costs
- Critical visibility into the process
- Chemical savings
- Save time
- Consistent compliance and reduced fees

RTC-DAF in Action: Example of Real Benefits

Your process might still be highly variable, but the desired outcome is consistently met regardless of variation.

Performance Curve

Polymer Performance

There is an **OPTIMAL** dose ratio.

Adding chemical beyond the optimal point is wasting both chemical and budget.

MORE POLYMER \neq BETTER RECOVERY

A modern industrial building with large glass windows and a blue sky background. The building has a multi-story design with a prominent glass facade on the right side. The sky is a deep blue with some light clouds. A large blue diagonal shape is overlaid on the left side of the image, containing the text.

Instrumentation + Software
**= Less Uncertainty
& More Efficiency**

A photograph of an industrial facility, possibly a water treatment plant, at sunset. The sky is a vibrant orange and yellow, with the sun low on the horizon. In the foreground, there are large, dark, cylindrical structures. In the background, two workers wearing hard hats are standing on a metal walkway and shaking hands. The overall scene conveys a sense of accomplishment and partnership.

One More Benefit? Hach Support

Yearly Service Partnership

1. A dedicated Hach® support team available to consult
2. Hach technicians providing guidance specific to your plant and application
3. Monthly reports to review your plant's performance
4. Reduced risk of unexpected downtime with service/maintenance recommendations
