

# CASE STUDY: BG PLATINUM® FUEL SYSTEM SERVICE

**SERVICE** BG Platinum® Fuel System Service

PRODUCTS BG Platinum® Air Intake, Valve & Combustion Chamber Cleaner, PN 261

BG Platinum® 44K® PN 208

**EQUIPMENT** BG Platinum® Fuel Service Supply Tool, PN E101-1249

BG AE04 Intake Adaptor, PN E101-2034, Black Cone

BG Rev-It,® PN E101-4110

BG PLATINU

VEHICLE: 2020 Ford Explorer, 2.3L 3,472 miles (5,588 km)

## **PROBLEM**

In gasoline direct injection (GDI) engines, built-up carbon can have a substantial effect on the air to fuel ratio which leads to inefficient combustion and drivability issues such as misfire, power loss, and poor fuel economy.

Cleaner applied through the fuel system will not address deposits on the intake plenum or valves. This is due to the placement of the high pressure injector inside the combustion chamber on GDI engines.

#### SOLUTION

Following platform-specific instructions, the BG Platinum® Fuel System Service will remove deposits from the backs of intake valves, combustion chambers, and injector tips.

- Restores power
- Improves drivability
- · Restores fuel economy

INTAKE VALVE

PISTON TOP

#### SUMMARY

- GDI technology offers impressive performance and fuel economy; however, these engines are highly complex
  and require additional service and preventive maintenance to keep these benefits and prolong the life of the
  engine, while maximizing fuel economy and vehicle drivability. Frequent carbon cleaning will prevent major
  issues to the vehicle's engine and fuel system.
- The BG Platinum® Fuel System Service uses specialized tools to administer product directly into the intake
  plenum through an accessible port that draws a metered vacuum. An ultra-fine mist of potent cleaning
  chemistry is used to thoroughly coat all surfaces removing the maximum amount of deposits in a single
  service, including heavy deposits from the backs of intake valves, in combustion chambers, and on injector
  tips.
