

Get a **STEP** up on bleacher **SAFETY.**

School bleachers stand ready to support your fans. But do they support your fans safely? Climbing up and down bleachers without defined aisles, steps and handrails can be challenging and dangerous for fans, and a liability for facilities.

Many bleachers installed before 1996 fail to meet today's standards and safety code requirements. By installing dedicated aisles, steps and handrails you can safely, quickly and cost-effectively update your bleacher seating.

Features & Options:

- Handrails are available in standard black or you can special order your school colors (powder coated finish)
- Steps are made of formed galvanized steel with plastic end caps to cover any sharp edges and are finished off with non-slip safety grip tape
- Steps and handrails are factory engineered, designed and tested to meet all required structural load requirements

Foot-Level Aisle Steps & Handrail Solution:
Compatible on bleacher models 2400, 2600

SAFE BLEACHERS HAVE DEDICATED AISLES & HANDRAILS

There are two different bleacher aisle solutions. The solution you need depends on your bleacher model.

Foot-Level Aisle Steps & Handrails: compatible on models 2400 & 2600

BEFORE | Bleacher Model 2400

AFTER | Bleacher Model 2400

Some seats are cut out to reach code compliant 48" aisle width, intermediate steps are installed and handrails are secured.

Seat-Level Aisle Steps & Handrails: compatible on models 100, 200 & 2000

BEFORE | Bleacher Model 100

AFTER | Bleacher Model 100

48" wide steps are inserted into the lower foot areas and handrails are secured.

PLAY IT SAFE

with dedicated bleacher aisles & handrails.

Protect your spectators and your school. Call now for information on retrofit aisles and handrails:
