Best-Of-Breed Cloud Storage and Cost-Effective Data-Management Solution with Atempo Miria and Wasabi

Atempo is a leading independent European-based software vendor with an established global presence providing solutions to protect, store, move and recover all mission-critical data sets for thousands of companies worldwide.

Today, organizations must manage more critical data than ever before from a few Petabytes to more than one Exabyte. Traditional solutions have proven ill-equipped to keep up with these demands. To ensure these increasing volumes of critical information are always available when needed, organizations require new advanced data management capabilities.

Miria is an open solution which includes Backup, Archiving, Migration and Data Movement for heterogeneous storages.

Miria is the one solution that enables IT organizations to address storage management challenges today and for the long term. Miria represents the most efficient, reliable, and cost-effective way to protect critical business information.

Atempo and Wasabi Provide a Comprehensive Solution for Backup, Archive, and Migration

The combination of Atempo's Miria platform with Wasabi's hot cloud storage infrastructure provides total flexibility for cloud data management requirements, and large data sets can be hosted, stored, replicated, and recovered at any time through Wasabi's platform.

Atempo's Miria Data Management platform orchestrates all large data archiving requirements from any primary storage to Wasabi's Hot Cloud S3 infrastructure. Miria enables manual and automatic archiving to simplify access and economize on storage costs. The solution also provides data migration and backup capability for any file system accessed by NFS or SMB/CIFS protocols.

Atempo has significant experience in very high capacity data environments such as Genomic Research, Automotive Industries, Particle Physics. The company has a firm foothold in the Media & Entertainment sector with extensive industry workflow compatibility.

Miria's security integrations, enriched metadata archives and open format approach mean that data stored on the Wasabi Cloud is safe, accessible and rapidly recoverable. Miria meets any requirement: data volumes, different file sizes, file formats, storage technologies and workflows.

To avoid data transit bottlenecks, Miria deploys dynamically parallelized data streams and multi-threaded processes to ensure optimal archive, backup and migration performances. The software never requires production storage shutdown and never degrades storage performances when moving or copying data.
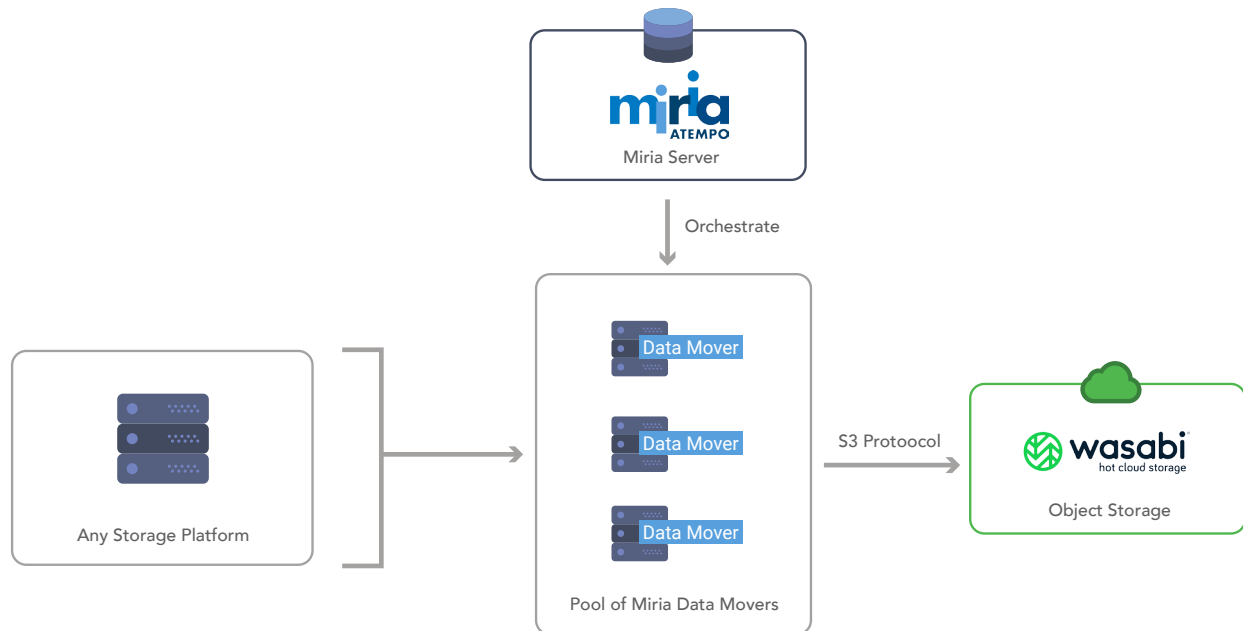

KEY FEATURES

- Scale Out flexible architecture: Optimizing performances is made simple by adjusting the number of Data Movers

- Open on Storages in Hybrid environments (cloud, disk, object, tape)

- Seamless integration of Wasabi Cloud for Archive, Backup to the cloud and Migration between storages

- Full interoperability through the use of the S3 protocol and standard format

- End-to-End Scale Out architecture that simplifies large volume of data management

BENEFITS

- Immediate & massive reduction of storage TCO by moving cold data to a more efficient and less expensive storage

- Easy migration of massive file sets and workflows to the cloud

- Optimization of data lifecycle

The solution is fully scalable – simply add or remove a Miria Data Mover as required. Other hybrid target storages are available including disk, object, or physical ("air-gapped") media such as tape. Miria's global administrative interfaces makes creating and refining data archiving and backup policies for all storages very simple.

The following diagram shows the level of flexibility and range of the Atempo Miria - Wasabi integration.

About Atempo

Atempo is a leading independent European-based software vendor with an established global presence providing solutions to protect, store, move and recover all mission-critical data sets for thousands of companies worldwide. With over 25 years' experience in data protection, Atempo offers a complete range of proven solutions for physical and virtual servers backup, workstations and migration between different storages of very large data volumes. Atempo's three flagship solutions, Lina, Miria and Tina are labeled "As used by French Armed Forces" and "France Cybersecurity". Selected to join the French Tech 120, a government program designed to nurture 25 unicorns by 2025, Atempo is headquartered in Paris and is present in Europe, the US and Asia with a partner network in excess of 100 partners, integrators and managed service providers.
