

Wasabi Cloud Storage for Quest QoreStor Deduplication and Replication

Leverage Inexpensive Cloud Storage From Wasabi Directly Through The Quest QoreStor User Interface

With the World Economic Forum [predicting](#) that the accumulated digital universe is going to reach 44 zettabytes in the coming year – a 10x jump from just one year prior – it’s no wonder storage has become one of the toughest challenges IT teams face today.

But what if you could leverage cost-effective cloud storage directly through your cloud-connected, software-driven storage, leading to the ability to meet the most stringent data retention policies without blowing up your storage budget?

It’s now possible through an integrated interface between Quest QoreStor – cloud-connected storage, deduplication and replication – and Wasabi, the hot cloud storage company, to deliver cloud storage at a lower price and faster performance than first-generation cloud storage services from AWS and Azure.

With Quest QoreStor, you’ll be able to connect to the cloud for data archiving and disaster recovery faster and more easily, accelerate backup performance through protocol accelerators, and reduce storage requirements and costs through content-aware, variable block deduplication.

With Wasabi Hot Cloud Storage, you’ll get a universal, one-size-fits-all cloud object storage service that eliminates confusing storage tiers and satisfies nearly all storage performance requirements – all at a lower price and faster speed than traditional storage services and with no costs for the egress of data or API requests. Wasabi’s single tier of hot storage allows for all data to be accessed immediately, creating an “active archive” of data. This coupled with Wasabi’s fast performance, access to all your files in Wasabi’s cloud is simple and cost-effective.

Seamless Backups to Cloud Storage

Looking to make backups faster, shorter and easier? Look no further. You can enable Wasabi as a cloud tier option directly in the QoreStor user interface, allowing you to leverage Wasabi’s cost-effective cloud storage. Wasabi users can speed up backups, deduplicate data, and compress and encrypt data using QoreStor before sending it to Wasabi’s storage user interface, resulting in a reduced cloud footprint regardless of the backup software being used.

KEY FEATURES

Application-level support

Cloud-enable all your backups with generic NFS/CIFS support, enabling QoreStor and Wasabi to work with applications that don’t have an S3-compatible object storage interface, like Oracle RMAN.

On-site copy

Accelerate both backups and recovery due to the ability to stage data locally, instead of only in the cloud.

Unparalleled deduplication

Take advantage of faster, less expensive backups with unique protocol accelerators, enterprise-class data deduplication that works on data stored locally and in the cloud.

Significantly faster restores

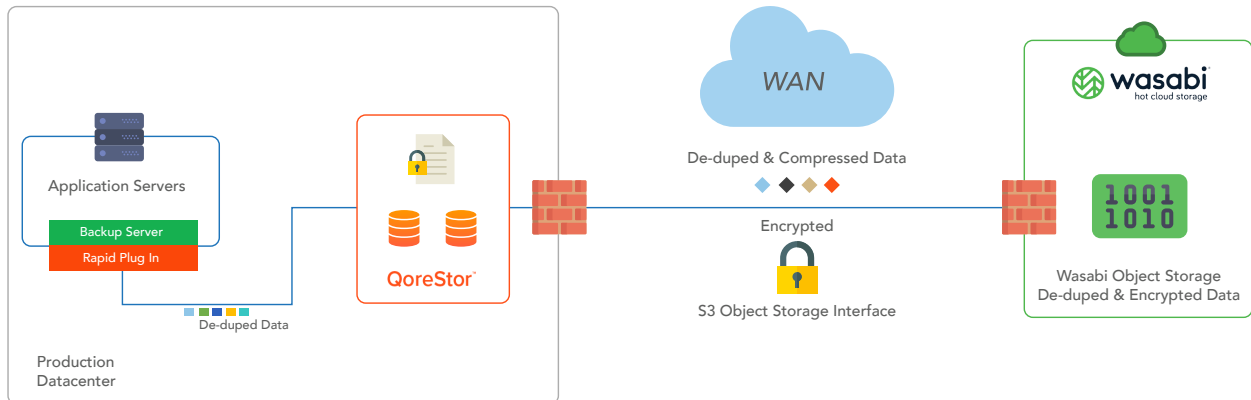

Experience faster restores from data migrated to the cloud due to enterprise-class data deduplication of data stored locally.

BENEFITS

- Minimize cloud egress costs
- Reduce OpEx by optimizing cloud storage and paying as you grow
- Achieve even lower cloud storage costs with source-side deduplication and compression
- Store nearly any data, including data for applications without an object interface, like Oracle RMAN
- Accelerate both backups and recovery

Reduce Uncertainty of Cloud Recovery Costs

But the storage benefits aren't even the half of it. With QoreStor + Wasabi, you can significantly reduce uncertainty when it comes to predicting the costs of cloud-based recovery. Why? Because Wasabi doesn't charge for API requests or the egress of data, resulting in a storage bill that doesn't fluctuate with data retrieval rates. Couple that with the advanced recovery technology built into QoreStor, which speeds the recovery of cloud-stored data, you'll get your systems back up and running faster, and for less cost.

ABOUT WASABI

Wasabi provides simple, predictable and affordable hot cloud storage for businesses all over the world. It enables organizations to store and instantly access an infinite amount of data at 1/5th the price of the competition with no complex tiers or unpredictable egress fees. Trusted by tens of thousands of customers worldwide, Wasabi has been recognized as one of technology's fastest-growing and most visionary companies. Created by Carbonite co-founders and cloud storage pioneers David Friend and Jeff Flowers, Wasabi is a privately held company based in Boston.
