# Direct Connectivity to Wasabi Hot Cloud Storage with Equinix Fabric

## Direct Connectivity to the World's Most Affordable Cloud Storage Service

As more businesses adopt cloud services, they increasingly demand the speed and quality of service they are accustomed to in on-premises corporate environments. As a result, organizations are under increased pressure to connect their applications, data, devices, strategic business partners, and distributed cloud environments in the most effective high speed and secure manner. This makes an interconnected cloud architecture a key priority.

The move to the cloud often begins with thinking about where to store business-critical data and how to enable connections to it. Equinix Fabric enables organizations to simplify the often complex and problematic task of connecting their data networks, compute, applications and storage. It provides a full complement of infrastructure connections, such as data center, edge, interconnection, and physical and virtual services.

The Equinix Fabric and Wasabi hot cloud storage joint solution solves various connectivity challenges. It provides private, low-latency connections to Wasabi storage regions for business-critical apps, services and partners, as well as telecommunications carriers and providers.

Organizations can connect their enterprise network directly to Wasabi via the Equinix Fabric over 1 Gbps and 10 Gbps interfaces. Equinix Fabric users have the ability to right-size connection speeds as demands shift. They can spin up and down in real time in increments from 50 Mbps to 10 Gbps.
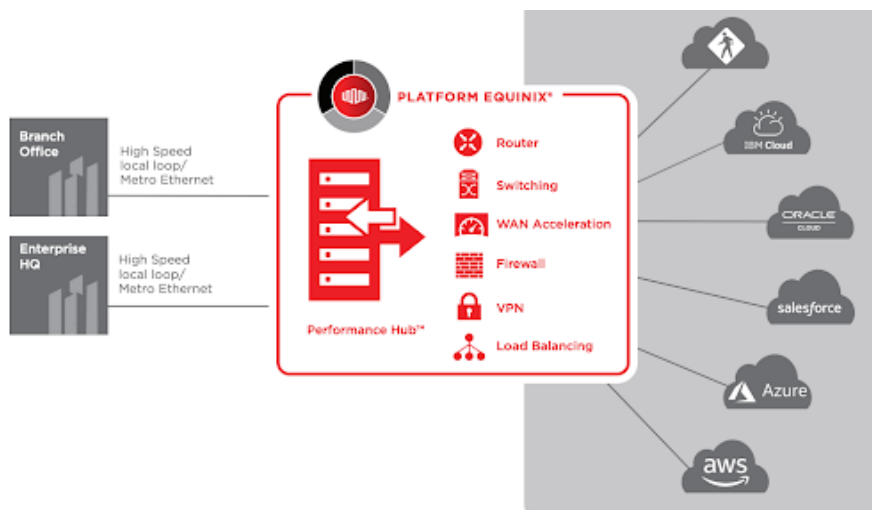

## Flexible, On-Demand, Global Interconnection

Available in 25+ locations across the globe, the advanced, software-defined interconnection solution provides consistent throughput to Wasabi and other cloud services, minimizing network latency when deployed close to the cloud service provider edge within a Performance Hub™.  Equinix Performance Hub is an extension node of an enterprise's network into an Equinix International Business Exchange™ (IBX®) data center. It enables organizations to securely and reliably connect to the network and to Wasabi. The deployment in the IBX includes off-the-shelf networking and other infrastructure equipment.

## KEY FEATURES

- Direct enterprise network connectivity to Wasabi
- Global availability in 25+ markets
- Self-service portal and API for on-demand provisioning

## BENEFITS

- Reduced network latency for faster storage read/writes
- Consistent throughput and performance
- Robust security and control

## Connecting Your Enterprise to Wasabi Via Equinix Fabric

Equinix Fabric lets you easily increase bandwidth and grow the number of directly connected clouds within your network infrastructure. You can quickly provision or modify connections to Wasabi and other cloud providers in near real-time through a self-service portal or APIs.

## Find Wasabi In The Equinix Fabric On-Line Directory

You can currently find Wasabi in the Equinix Fabric Provider Directory as a 'Local Connection' in Amsterdam, Ashburn, Dallas, Frankfurt, London, Paris, Seattle, Toronto with future Wasabi storage regions being deployed in Equinix data centers regularly.

## Wasabi Delivers Breakthrough Cloud Storage Economics

Wasabi was specifically conceived to make cloud storage a commonplace utility like electricity. Unlike legacy cloud storage services with confusing storage tiers and complex pricing schemes, Wasabi hot cloud storage is extremely easy to understand and incredibly economical to scale. One product, with predictable and straightforward pricing, supports virtually every cloud storage application. Wasabi is 80% cheaper than Amazon S3, with no egress fees or API charges.

Engineered for extreme data integrity and security, Wasabi provides eleven 9s of object durability and supports configurable data immutability to protect against accidental deletions, ransomware and malware.
