Veritas NetBackup with Wasabi hot cloud storage

Lower the cost and complexity of enterprise-class business resilience

What is Veritas NetBackup?

NetBackup is the world's #1 enterprise backup and recovery solution, trusted by 87% of the Fortune Global 500. By unifying data protection across all environments, NetBackup gives enterprise IT a simple and powerful way to ensure integrity and availability of data–wherever it may be–from edge to core to the cloud. With more than 100 exabytes of information under its care, no other solution comes close to NetBackup for enterprise-class protection, detection, and recovery.

What is Wasabi hot cloud storage?

Wasabi is revolutionizing cloud storage for the data era. Trusted by tens of thousands of customers worldwide, Wasabi's hot cloud storage enables organizations of all sizes to securely store and instantly access a nearly unlimited amount of data at a fraction of the cost of competitive solutions. By increasing performance and eliminating complicated storage tiers and unpredictable fees for egress and API calls, Wasabi simplifies data management decision-making so that organizations can keep more of the data they need to drive innovation.

Why they're better together

NetBackup's ability to ingest data from any source makes it an ideal solution for large enterprises wishing to tame and protect their hybrid storage environments. Now that Veritas NetBackup has certified the use of Wasabi for primary and secondary storage, customers can choose to archive on-premise or in Wasabi's low-cost, high-performing hot cloud storage to drastically reduce and simplify their data management costs.

KEY FEATURES

- Flexible hybrid cloud deployment for supporting any workload or architecture at scale

- Operational simplicity for automation of discovery, protection, and recovery

- Enterprise-grade resiliency for mitigation against ransomware and other threats

BENEFITS

- Reduce total enterprise business resilience costs with predictable billing and no surprises

- Simplified data management and reduced cloud complexity

- Mitigate ransomware threats with air-gapped archive

Not only is Wasabi 80% less expensive than traditional first-generation cloud providers, Wasabi keeps all data hot, so it can be accessed in milliseconds. This means shorter upload windows and faster inline reads and recall times for Veritas-Wasabi customers.

Unified Data Protection for Hybrid Multi-cloud Enterprise IT

NetBackup supports more than 800 workloads, 1,400 storage targets, and 60 cloud providers for complete data protection across physical, virtual, containerized apps, hybrid and multi-cloud environments, including support for:

- **Microsoft Windows, Linux, and Unix operating systems**

- **VMware vSphere, Red Hat Virtualization, Microsoft Hyper-V**

- **Databases, traditional and cloud-native applications**

Here are just a few ways in which Veritas NetBackup and Wasabi hot cloud storage deliver best-in-class enterprise backup and recovery:

Optimized hybrid multi-cloud storage

With NetBackup's built-in MSDP-C feature, certified for use with Wasabi, you can deduplicate data across your hybrid multi-cloud environment for additional cost savings and backup service optimization:
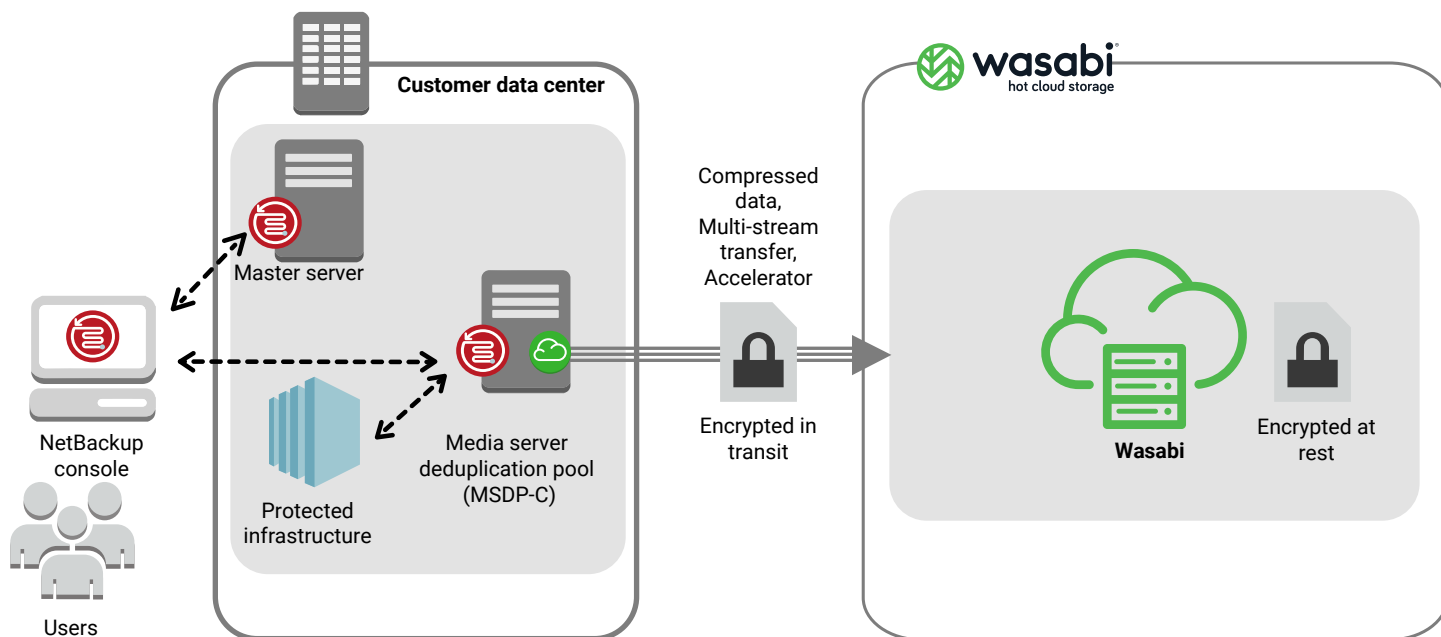

- **Eliminate redundant data stored across multiple environments**

- **Reduce backup windows and bandwidth requirements**

- **Save on costly infrastructure expansion and refreshes**

Enterprise-grade resilience and protection from ransomware

To be resilient you need to be able to recover from any scenario be they environmental issues, human failure, or security incidents such as ransomware. NetBackup provides end-to-end ransomware protection, detection, and recovery of your business-critical data with near-zero RPO and RTO. Wasabi supports this mission with eleven nines (99.999999999%) of data durability, encryption of data in transit and at rest, and object immutability that guarantees stored objects cannot be deleted or modified by anyone.

Predictable pricing, even when testing

Your resiliency plan is only as good as your last test. NetBackup provides a simple, non-disruptive way of validating your resiliency plan for assurance and compliance through automated recovery and rehearsal of business-critical applications. Because Wasabi doesn't charge for egress or API requests, your cloud storage costs remain predictable and easy to understand regardless of how often you test. With Wasabi, you can use NetBackup's granular restore with confidence, knowing that your disaster recovery plan won't impact your budget.

For a more cost-effective approach to enterprise-class resilience, put NetBackup with Wasabi to work in your enterprise today. Contact sales@wasabi.com to learn how to get started
