Limitlessly Scalable storage and ransomware protection for your Catalogic DPX Backups with Wasabi Hot Cloud Storage

What is Catalogic DPX?

Backups are a necessary insurance policy. They might be used to restore a database table or a single file after accidental deletion, or to recover your servers and data after a ransomware attack. In the worst case, you can recover all your data and systems lost to a natural disaster or a major ransomware attack. In all these use cases, broad application and systems coverage and reliability is paramount.

But backup can also be more than an insurance policy. With instantly accessible backup images, you can leverage backup data sets for many other tasks, such as dev-test, DevOps, reporting and compliance, and analytics.

Catalogic DPX® and DPX vPlus offer robust, secure, and cost-effective enterprise data protection solutions. These solutions safeguard your data from human errors, disasters, and ransomware attacks. Supporting both physical and virtual environments, Catalogic DPX® and DPX vPlus enable easy recovery of files and applications directly from cloud backup storage. In addition to comprehensive data protection, Catalogic DPX® and DPX vPlus also provide features including ransomware detection, fully protect Microsoft 365 and Open VM environments.
