

Wasabi App for Acronis Cyber Protect Cloud ensures seamless Account Management for MSPs

Defense against cyber threats with secure cloud storage

In today's relentless digital landscape, backup is not just a safety net; it's the cornerstone of proactive data security and unwavering cyber resiliency. With the evolving threat landscape, mere storage is insufficient. Acronis Cyber Protect addresses these challenges by integrating backup and recovery with cybersecurity. This revolutionary approach eliminates fundamental complexity challenges, delivers better protection against today's advanced threats, and maximizes resource efficiency.

Wasabi Cloud Storage and Acronis Cyber Protect seamlessly combine to provide comprehensive backups and secure, easy-to-manage and affordable cloud storage to help businesses manage storage costs and complexity. Acronis Cyber Protect seamlessly combines advanced cyber security features with industry leading data protection to provide a complete, streamlined cyber resilience solution. Backing up to Wasabi's immutable object cloud storage gives users access to cyber resilient cloud storage that is 80% less expensive than AWS with no fees for egress or API requests, making Wasabi an ideal destination for both active and archival data.

Now, with support for full channel account creation and sub-account flexibility, MSPs can structure multi-tier environments to fit their business model, whether they manage resellers, internal teams, or complex infrastructure environments. This expanded control enables more granular oversight, easier scaling, and greater alignment between your storage strategy and service delivery.

Acronis

Features

- Secure, cyber resilient data protection solution
- Simplify the backup redundancies with direct-to-cloud primary and secondary copies
- Wasabi CyberApp for Acronis allows for seamless account management for MSPs

Benefits

- Advanced cyber security for a complete data protection solution
- Lower overall IT operations
- Simple to manage platforms allows seamless and cost-effective scalability for rapid data growth management
- Manage all aspects of sub-accounts from creation to usage to bucket management in one platform with the Wasabi App for Acronis

Unified cyber protection with Wasabi and Acronis

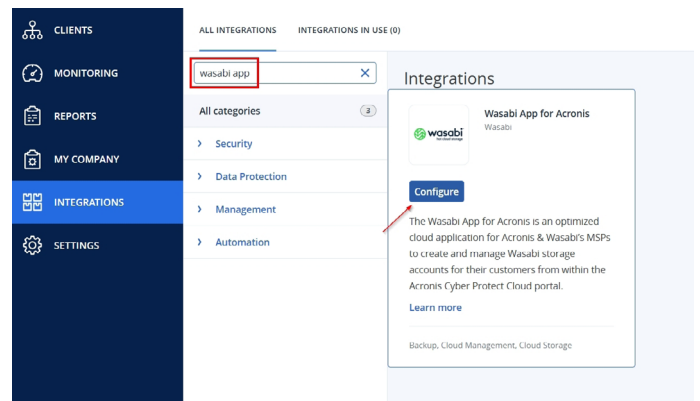

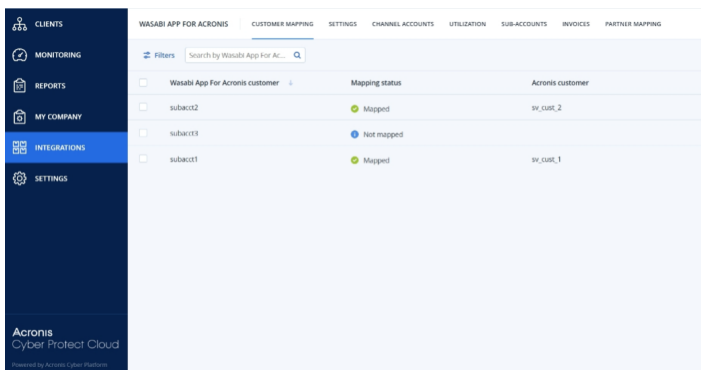

With Acronis Cyber Protect, you can copy and restore your backups directly to the cloud eliminating the need to manage additional gateway machines. Acronis provides advanced cyber protection for every endpoint in any location and combined with the cyber resilient features of Wasabi such as Multi-User Authentication, organizations can be assured that both their data and account is safe. Seamless integration and management of the combined cyber protection solution ensure that organization can reduce complexity, scale efficiently and provide flexible data management solutions.

Together, they offer a comprehensive solution that empowers businesses to back up their data directly to Wasabi's ultra-secure and cost-efficient cloud storage, ensuring unparalleled protection and peace of mind. From backing up and restoring Windows, Linux, and virtual machine data to recovering systems with bare-metal restore capabilities, Acronis provides a comprehensive solution that leaves no stone unturned. Now, with the ability to back up directly to Wasabi's cloud storage, businesses can elevate their data protection strategies to unprecedented heights.

Wasabi App for Acronis Cyber Protect Cloud ensures seamless account management for MSPs

The Wasabi App for Acronis Cyber Protect Cloud is an integration built to enable Acronis MSPs to manage their customers within the Acronis Cyber Protect Cloud Platform. Through this first of its-kind integration, Acronis MSPs can integrate affordable and simple hot cloud storage manage all their customer accounts through one single pane of glass. All aspects of MSP customer management (such as creation, modification, suspension & deletion) can be managed within the Acronis Platform saving you valuable time and reducing the complexity on managing your customers across multiple platforms.

Wasabi's unique integration also allows an MSP to create and manage storage buckets in addition to CRUD operations against a customer account. With simplified access to every aspect of your customer's data, you're unlocking the true potential for your business. Free yourself from multiple platforms of management and complex hurdles to easily scale and manage your customer accounts.

Unlock full multi-tenant control within Acronis Cyber Protect Cloud

The latest release of the Wasabi App for Acronis Cyber Protect Cloud expands support to all MSPs and professional services managing complex environments. With support for channel accounts now built directly into the Acronis interface, you can operate on a distributor-led level, creating and managing both partner-level and customer-level storage relationships all from a single console.

This enhanced integration unlocks full multi-tier provisioning within the Acronis platform. You can map storage, monitor usage, configure alerts, and streamline onboarding, all without leaving the Acronis Cyber Protect Cloud environment. Whether you support a multi-tiered partner model or simply want more granular control over your tenants, this update makes it easier than ever to scale with confidence.
