# Wasabi Surveillance Cloud

Enabling Video Management Systems with low-cost, high performance cloud storage

Wasabi Surveillance Cloud effortlessly enables on-premise video management systems with the unlimited scalability and security of Wasabi cloud storage. With Wasabi Surveillance Cloud, a once siloed VMS technology, instantly becomes cloud-aware without changes to existing operations.

Wasabi Surveillance Cloud is a bundle offering which includes the WSC software application and Wasabi object storage subscription. End-user customers install the WSC software on a local Windows Recording Server or PC to pair the VMS with a storage bucket in the Wasabi cloud.

WSC integrates with the designated VMS, automating the assignment of video data based on user-defined policies thus addressing various workflow challenges - from data storage costs, transparent data migration, and disaster recovery.

Using Wasabi Surveillance Cloud, organizations keep the storage features that their on-premises cloud storage offers without ever running out of capacity. There's no need to "rip and replace" your current solution. WSC enhances your existing operations by providing the ability to scale your solution on-demand without the added storage burden.
