

XenData Active Archives

Archive Video, Image, Scientific and Engineering Files to the World's Most Affordable and Fastest-Performing Storage Cloud

Active Archives contain data that an organization cannot afford to lose. However, only a portion of the archived content is periodically restored and these restores are normally not intensive. Traditionally, large active archives have been held on premises using data tape robotic libraries.

More recently, cloud object storage has offered the promise of ease of use, but the high egress costs charged by first-generation cloud storage providers have been a barrier to adoption. But that is no longer a problem: Wasabi hot cloud storage has no egress or API charges and it is incredibly affordable and fast.

The XenData-Wasabi partnership means that you can implement affordable hybrid cloud active archives with great functionality. XenData software runs on a Windows server and manages your on-premises storage, a local disk cache (with tailored disk management policies) and Wasabi hot cloud storage to get the most from your hybrid storage system.

Wasabi Hot Cloud Storage Delivers Breakthrough Economics and Performance

Wasabi hot cloud storage is 80% less expensive and up to 6x the speed of AWS S3, making it an ideal archive storage repository. And unlike various “cold” storage services from other cloud providers (which take hours or days to retrieve a content item), all data stored on Wasabi is immediately accessible.

Specifically conceived to make cloud storage a commonplace utility like electricity, Wasabi hot storage is easy to understand, easy to order and incredibly cost-effective to scale. With Wasabi there are no confusing cloud storage tiers to decipher and no complicated fee structures to decode. And best of all, no egress or API charges.

Engineered for extreme data integrity and security, Wasabi provides eleven nines (99.99999999%) of object durability and supports configurable data immutability to protect against accidental deletions, ransomware and viruses.

A Better Active Archive

The managed local disk, which can scale to 256 TB, means that your most frequently accessed files are delivered with high performance directly from cache, minimizing your use of Internet bandwidth. Also, you can schedule uploads to Wasabi which further optimizes your use of available Internet bandwidth.

KEY FEATURES

- A single file system that scales to Petabytes
- On-premises disk cache up to 256 TB
- Connects to LAN via SMB, NFS or FTP
- Fast Multi-Part HTTPS/S3 connection to cloud
- Supports Partial File Restore (PFR)
- Schedule uploads to off peak hours
- Supports Microsoft Active Directory

BENEFITS

- Works with all file-based applications
- Easy integration into existing infrastructure
- Fast restore of frequently accessed files from local disk
- Rapid retrieval of archived content stored in the cloud with no egress or API fees
- Optimize use of available Internet bandwidth
- Partial File Restore is ideal for fast video clip creation

The solution creates an active archive with a single highly scalable file system that supports multiple simultaneous applications and partial file restore for creating video clips. It even supports multiple cloud storage providers within the single file system.

Upload and Share Worldwide

Upload files from anywhere, directly to the cloud archive using S3-compatible tools or the Wasabi console. And if you want to share content, make the files in the archive available for download as read-only.

ABOUT WASABI

Wasabi is the hot cloud storage company delivering low-cost, fast, and reliable cloud storage. Wasabi is 80% cheaper and up to 6x faster than Amazon S3, with 100% data immutability protection and no data egress fees. Created by Carbonite co-founders and cloud storage pioneers David Friend and Jeff Flowers, Wasabi is on a mission to commoditize the storage industry. Wasabi is a privately held company based in Boston, MA.
