

Dell PowerProtect DD Series Appliance with Wasabi Hot Cloud

Executive Summary

Wasabi and Dell Technologies partner to offer cloud storage solutions that have been validated for use with Dell’s Data Protection software. These Dell + Wasabi solutions combine with the PowerProtect DD series to protect, manage, and recover data at scale with Wasabi’s industry-leading cloud storage. As the next generation of Dell Data Domain appliances, DD series sets the bar for efficient data management from edge to core to cloud and includes the ecosystem support and comprehensive data protection that customers have come to appreciate. Wasabi Hot Cloud Storage is simple, fast, and affordable cloud object storage with predictable pricing and no complex data tiers nor fees for egress or API calls. Together this solution is designed to support customers looking to benefit from the ease of use, economics, and security of Wasabi’s industry-leading cloud storage for long-term retention to the cloud.

Long Term Retention to the Cloud

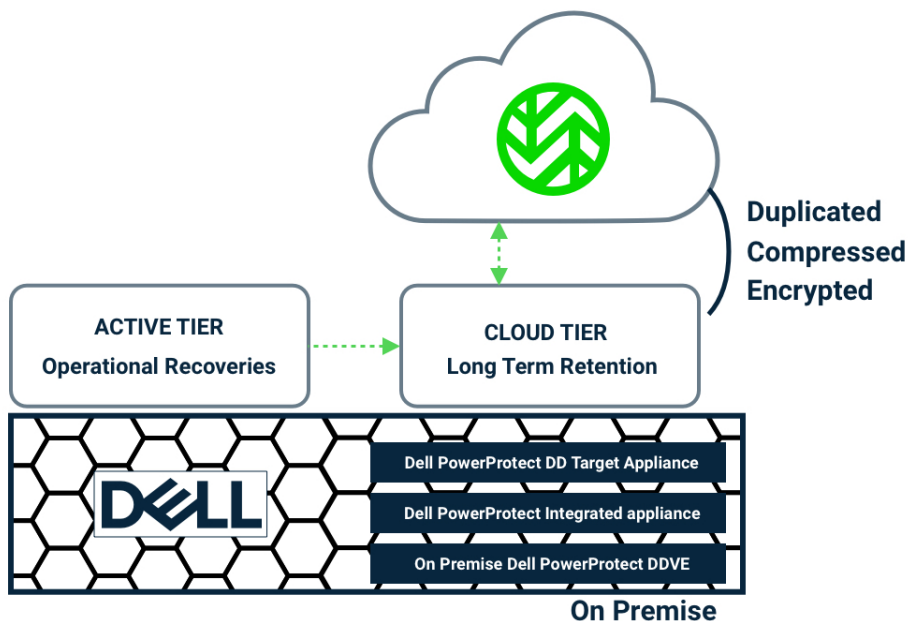

Long-term retention and disaster recovery in-cloud leveraging DD series Cloud Tier can natively move data to Wasabi Hot Cloud for extended retention. Only unique data is sent directly from PowerProtect DD to the cloud, and data that lands on the cloud object storage is already deduplicated. With deduplication ratios of up to 65x *, the storage footprint is greatly reduced, lowering overall TCO. Cloud Tier can scale up to 3PB of usable capacity. With DD Encryption, data in the cloud remains secure. Together, Dell Technologies and Wasabi seamlessly implement data retention while lowering your total cost of ownership by offloading aging data automatically to affordable, fast, and secure Wasabi Hot Cloud Storage.

KEY FEATURES

- Fast, secure, and efficient data protection
- Reduced storage footprint for lower TCO
- Data encryption and Immutable cloud storage for risk mitigation
- High performance global data center locations with high speed transfer and deduplication

BENEFITS

- Affordable long-term data retention
- Test & restore backups with no fees for egress or API calls
- Reduce cloud storage costs and complexity with flat predictable pricing
- Keep data sovereignty, higher performance, and protection from local disasters with global storage regions
