

Cyber Resilience for Hybrid and Multi-Cloud

Secure, fast, and cost-efficient data protection

With ransomware on the rise, growing data volumes, and unpredictable cloud storage costs, traditional backups can't keep up.

Wasabi and Cohesity DataProtect provide a unified solution that combines Cohesity's Zero Trust platform with Wasabi's immutable, high-performance, cost-predictable cloud storage to deliver modern cyber resilience across hybrid and multi-cloud environments.

Secure

Zero Trust data protection with immutable cloud storage ensures tamper-proof backups and clean recovery from ransomware.

Fast

Unified management and native S3 integration streamline backup, archive, and recovery workflows across environments.

Cost-efficient

Predictable pricing with no egress or API fees lowers the total cost of ownership and eliminates budget uncertainty.

Features

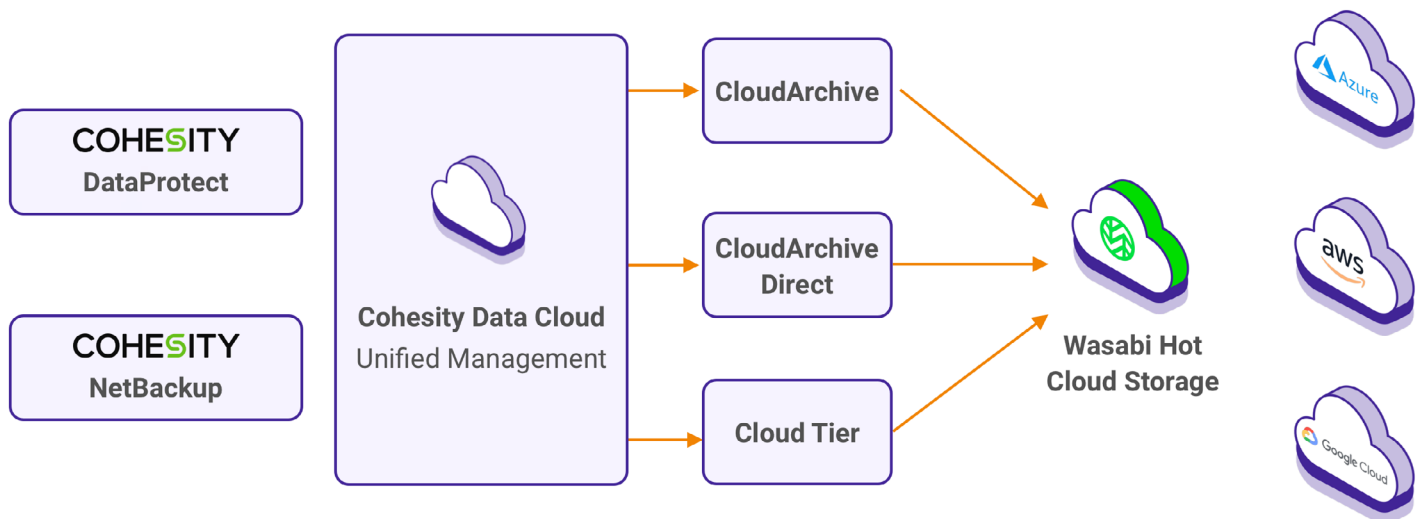

- End-to-end immutability across backup and storage
- No egress or API fees – ever
- Seamless S3-native integration
- Fast, reliable recovery at scale
- Predictable pricing for long-term planning

Benefits

- Protects critical workloads with tamper-proof, immutable backups that ensure reliable recovery.
- Reduces backup and archival costs through deduplication and efficient, cost-effective cloud storage.
- Simplifies operations with streamlined workflows that reduce management overhead.
- Enables hybrid and multi-cloud resilience with scalable recovery across environments.

Scale without limits, recover data quickly

Immutable backups are stored in tamper-proof cloud storage, ensuring clean, recoverable copies, while AI-driven threat detection and policy-based governance maintain consistent protection against ransomware and data loss.

Key features:

- **Transparent, flat-rate Wasabi pricing** with no egress or API fees enables frequent recovery testing and large-scale restores without surprise costs.
- **Reduced Total cost of ownership** with Cohesity's deduplication and intelligent tiering, combined with Wasabi's quick recovery times for a cost-effective hybrid solution
- **Unified management and automation** with Wasabi's seamless S3 integration within Cohesity DataProtect, policy-driven workflows, and a single interface for on-prem and cloud environments.

Cohesity DataProtect's scale-out architecture and Wasabi's unlimited cloud storage enable organizations to grow without infrastructure constraints. Data can be recovered expeditiously from local or cloud copies, supporting everything from granular restores to full disaster recovery—without performance or cost limitations.

Cohesity CloudArchive provides immutable, long-term retention for compliance and cyber resilience, while Cloud Tier with Wasabi reduces on-prem storage costs by tiering cold data to the cloud. Together, this solution provides the flexibility needed to securely scale and protect data in any environment.
