# CrashPlan Cyber-Ready Data Resilience: Comprehensive Data Backup and Recovery Anytime, Anywhere Without Disruption

Your data is more than just files—it's intellectual property, operational knowledge, and the key to your competitive advantage. As workplaces become more distributed and data increasingly decentralized, protecting it requires more than a traditional backup solution.

With secure, backup, seamless recovery and E-Discovery/Search, CrashPlan keeps businesses moving forward without disruption, whether recovering from disasters, ransomware, accidental deletions, or insider threats.

CrashPlan combines its enterprise-grade backup and recovery platform with Wasabi's affordable, high-performance cloud object storage to deliver the best of both worlds: resilient data protection and radically low total cost of ownership (TCO). Wasabi eliminates the costly egress and API fees that hyperscalers charge with its flat-rate, no-surprise pricing model—enabling CrashPlan customers to retain more data for longer periods at a fraction of the cost.

This joint solution empowers IT leaders to build a scalable, cyber-resilient data protection strategy that covers Microsoft 365, Google Workspace, endpoint devices, and file servers—without overcomplicating their tech stack or budget. Together, CrashPlan and Wasabi deliver a powerful, cloud-first backup architecture designed for today's data-driven businesses.

Features

- Centralized backup management across endpoints, SaaS applications, and servers with flexible recovery options, including rapid cloud-to-cloud restore and granular search and preview.

- Safeguard your SaaS app data, including Microsoft 365 (Exchange Online, SharePoint, OneDrive) and Google Workspace (Gmail and Google Drive).

- Robust security and compliance controls, including end-to-end encryption, immutable backups, anomaly detection, full audit logging, role-based access, and delegated administration

- Active archive: Move aging or infrequently accessed data to Wasabi via CrashPlan for long-term, low-cost retention.

Benefits

- With pricing up to 80% less than the hyperscalers, and no fees for egress or API requests, you can store endless amounts of data without breaking the bank.

- Fast recovery and secure storage ensure uninterrupted operations and user productivity.

- Simple integration and management with predictable pricing and zero vendor lock-in.

- Zero-trust architecture helps meet compliance and governance requirements

- Scales from small businesses to large enterprises without increasing complexity.
