

# Scale out to Wasabi with Superna Golden Copy for Inexpensive Long-Term Cloud Storage

Superna Golden Copy is a tightly integrated file-to-object copy tool with a built-in load balancer for Dell ECS and other S3 targets, removing the requirement for external load balancers. An archive/backup and recall platform simplifies syncing files to object storage for long term retention or 3rd copies. Files are archived or backed up with full metadata protection using native Object property tags and native file format copies. Golden Copy provides a complete solution to simplify file to object archive, sync workflows from file to object and object back to file. Scale Out Copy Performance is optimized for small file and large file as well as for Cloud storage features such as versioning, locking, and multipart uploads and downloads.

## Wasabi Hot Cloud Storage Delivers Breakthrough Economics and Performance

Wasabi is the hot cloud storage company delivering low-cost, fast, and reliable cloud storage on-demand. Wasabi's solution is 80% less expensive and is faster than first-generation cloud vendors. Wasabi hot cloud storage is designed with eleven nines (99.99999999%) of object durability and data immutability that guarantees stored objects cannot be deleted or modified by anyone. Not only is Wasabi 80% less expensive to store data than traditional cloud providers, but there are also no fees for egress or API requests. Wasabi keeps all data "hot" so it can be accessed in milliseconds. All Superna and Wasabi customers can treat their data as hot data, so they can shorten upload windows and quickly access their data for faster restore times.

## Wasabi and Superna Golden Copy for Managing Data Growth

The rapid growth of unstructured data will increase customer requirements to achieve stale data for long term retention and provide off site backup copies. Golden Copy's high-performance scale-out technology allows users to capitalize on Wasabi's offsite cloud storage. Golden Copy's native S3 compatibility makes it easy to connect to Wasabi. Unlike other programs, with Golden Copy there is no requirement to use the tool to access your S3 data, eliminating vendor lock-in.
