Simplified Enterprise Data Availability & Resilience with Peer Global File Service & Wasabi Hot Cloud Storage

What is Peer Global File Service?

Today's always-on enterprise requires a holistic approach to data infrastructure that matches unique operational requirements. This is especially challenging with the growing cost of storage systems while pushing their capabilities in support of applications that are increasingly distributed.

In addition to optimizing system performance, assuring uptime is imperative for mission-critical applications like VDI where interruptions to sessions and data access can impact brand reputation, profitability, time to market, and customer service.

Proactively Ensure Availability and Avoid Downtime

Peer Software enables enterprise availability and resilience from Edge, to Data Center to Cloud. Peer's flagship solution, Peer Global File Service, features an active-active data fabric deployed across multiple branch office, data center and cloud locations to power failover and load balancing of user profiles and application data while protecting against ransomware and minimizing RTO and RPO in disaster scenarios.
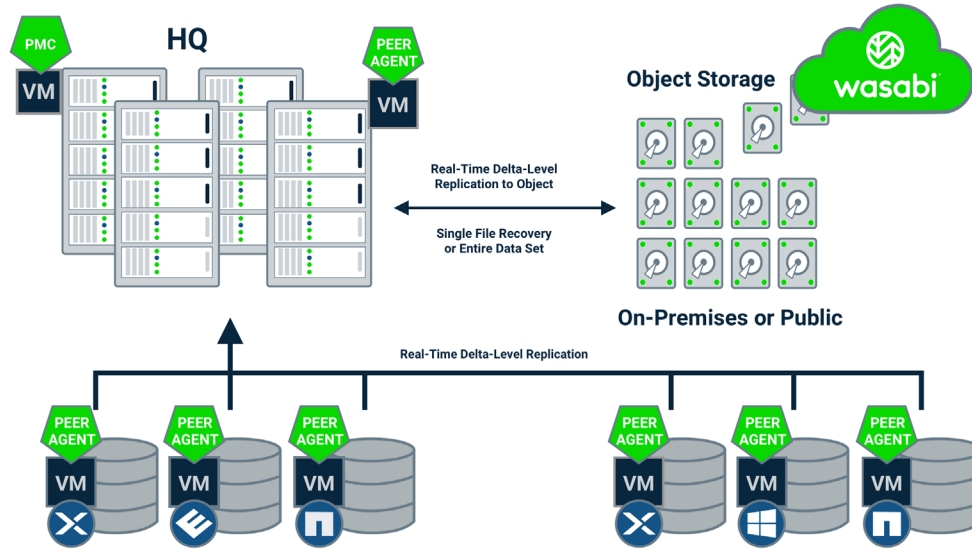

Why Peer Software and Wasabi Are Better Together

Peer Software's global file service and Wasabi hot cloud storage can help you ensure that user and application data is continuously available across your enterprise environment without breaking the bank.

KEY FEATURES

- Continuous data protection with simplified DR capabilities
- Flexible multi-platform interoperability
- Combined protection against ransomware

BENEFITS

- Cost-effective solutions with predictable budgeting
- Unique combination of DR protection that eliminates snapshot limitations with accessible hot storage
- Simple accessibility of application data across the enterprise

Accessing and recovering your stored data quickly and without limitations is vital. Peer Software and Wasabi combine to provide a unique combination of built-in failover/failback and disaster recovery protection that reduces or eliminates snapshot or backup window limitations to keep your critical data current and easily accessible on Wasabi hot storage.

Whether your data is stored on-prem or you are utilizing a multi-cloud system, with Peer Software and Wasabi, you can backup file data to Wasabi object storage without expensive hardware or the need to implement a proprietary file system. Through Peer Software, data in Wasabi cloud is stored in an open format that is immediately accessible.

With all these features, Peer Software and Wasabi also offer a predictable cost structure that your organization needs to budget for your data management.

About Wasabi

Wasabi is a public cloud object storage service that is 1/5th the price of AWS S3 and faster than the competition with no fees for egress or API requests. Wasabi provides 11 x 9s of data durability, high system availability, and support for immutable storage buckets. Wasabi is fully compatible with the AWS S3 API with support for hundreds of S3-compatible storage applications, including Object First, and has been certified for compliance with enterprise security and privacy standards.
