

Cut Cloud Compute And Storage Costs By More Than 50% With Vultr And Wasabi

Cloud computing customers that rely on the likes of AWS for compute and storage inevitably find themselves regretting exorbitant costs, particularly for network egress, once they reach scale. The solution to this paradox is to combine two leading independent infrastructure providers – Vultr and Wasabi – together.

Featuring virtualized cloud compute, bare metal, and managed Kubernetes, Vultr has enabled over a million customers to run applications on an elastically scalable cloud that delivers industry-leading price-performance.

Vultr has partnered with Wasabi, so that joint customers can privately transfer data at no cost between the two platforms. This allows joint customers to run web apps, media transcoding, image processing, and other kinds of workloads, for just a fraction of the cost they would incur by using AWS. The Wasabi-Vultr solution eliminates data transfer fees—both between Wasabi and Vultr, and Wasabi and the end-user—creating a highly predictable pricing structure for compute-intensive environments. Wasabi and Vultr offer a best-of-breed solution for both managed object storage and cloud computing.

Wasabi Hot Cloud Storage Delivers Breakthrough Economics and Performance

Wasabi is the hot cloud storage company delivering low-cost, fast, and reliable cloud storage on-demand. Wasabi's solution is faster than first-generation cloud vendors while remaining 80% less expensive. Wasabi hot cloud storage is designed with eleven nines (99.999999999%) of object durability and data immutability that guarantees stored objects cannot be deleted or modified by anyone. Not only is Wasabi 80% less expensive to store data than traditional cloud providers, but there are also no fees for egress or API requests. Wasabi keeps all data "hot" so it can be accessed in milliseconds. All Vultr and Wasabi customers can treat their data as hot data, so they can shorten upload windows and quickly access their data for faster restore times.

KEY FEATURES

- Virtual machines featuring shared or dedicated CPUs
- Bare metal servers providing single tenant isolation
- Global data center footprint across 4 continents
- Enterprise-grade network enabling Direct Connect
- Managed Kubernetes with free control plane

BENEFITS

- No egress fees
- Less than half the cost of EC2 & S3
- High speed connectivity with secure transport
- Easy to use control panel, APIs
- Improve developer productivity

MARKET SEGMENTS

- Backup & Recovery
- Disaster Recovery
- Content Delivery
- Media Asset Management
- And more

ABOUT WASABI

Wasabi provides simple, predictable and affordable hot cloud storage for businesses all over the world. It enables organizations to store and instantly access an unlimited amount of data at 1/5th the price of the competition with no complex tiers or unpredictable egress fees. Trusted by tens of thousands of customers worldwide, Wasabi has been recognized as one of technology's fastest-growing and most visionary companies. Created by Carbonite co-founders and cloud storage pioneers David Friend and Jeff Flowers, Wasabi is a privately held company based in Boston.
