Accelerate Cloud Migration and File Transfer with JetStream + Wasabi

The internet can be a temperamental place to do business, with frequent fluctuations in performance, causing important traffic to become lost, delayed, or corrupted. JetStream, a file transfer and acceleration service, doesn't consider these errors, just regular operating conditions. The JetStream accelerated file transfer solution provides enterprise speed, reliability, and security to help remote teams work together and collaborate faster. JetStream customers can quickly and easily send data to Wasabi, accelerating backups and reducing latency.

JetStream Delivers Reliable, High-Speed Cloud Connectivity

JetStream's proprietary technology provides point-to-point connectivity between the data source and destination and allows for organizations to transmit data over the Internet at speeds much higher than the standard public internet would ordinarily allow. Unlike TCP, a legacy transport technology, JetStream is resilient to unreliable connections and high latency that can cause upload operations to fail repeatedly. JetStream's transfers are also rated as up to 100x faster than standard TCP throughput.

JetStream S3 compatibility makes it ideal for sending data to and retrieving data from Wasabi's cloud. Large backup jobs often fail or take time to complete, especially when faced with competition for bandwidth. Using JetStream, customers can accelerate their upload windows and ensure that their data arrives successfully in their Wasabi bucket.

Wasabi Hot Cloud Storage Delivers Breakthrough Economics and Performance
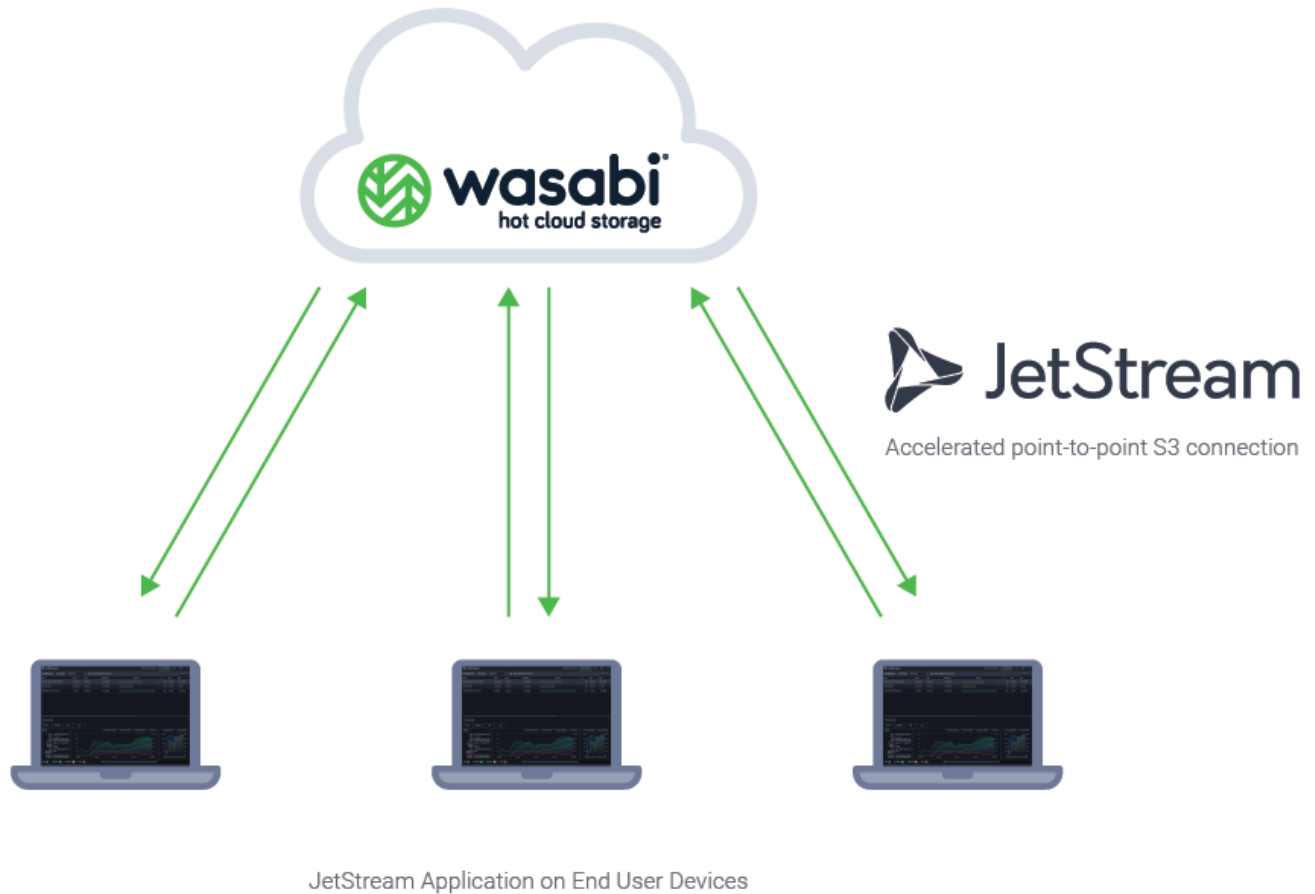

Wasabi is the hot cloud storage company delivering low-cost, fast and reliable cloud storage on-demand. Wasabi's solution is 80% less expensive and is faster than first-generation cloud vendors. Wasabi hot cloud storage is designed with eleven nines (99.999999999%) of object durability and optional data immutability that guarantees stored objects cannot be deleted or modified by anyone. Not only is Wasabi 80% less expensive to store data than traditional cloud providers, but there are also no fees for egress or API requests. Wasabi keeps all data "hot" so it can be accessed in milliseconds. All JetStream and Wasabi customers can treat their data as hot data, so they can shorten upload windows and quickly access their data for faster restore times.

KEY FEATURES

- Transfers up to 100x faster than TCP
- Use 100% of available network capacity
- S3 Compatibility
- Secure point-to-point connection

BENEFITS

- Accelerate file transfer and backup times
- Bypass fluctuating network conditions
- Never fail backup jobs again
- Reduce cloud storage cost and complexity

JetStream

Accelerated point-to-point S3 connection
