

# A fast and secure way to migrate data from other clouds to Wasabi

Users of AWS S3, Microsoft Azure and Google Cloud Platform can easily move to lower cost Wasabi storage. Saving up to 80% annually on cloud storage costs.

There are many reasons why organizations may wish to move their data from one cloud storage service to another. Unexpectedly high costs, performance issues, security, and fear of “lock in” are a few. When organizations decide that their existing cloud service is no longer the optimal choice, moving to a new cloud destination can be a daunting challenge. Often, the solution is not as simple as retargeting the data to a new cloud bucket or initiating a new “full” backup to the new bucket. If the data that exists in a cloud bucket is the primary or only version, it must be moved. Many who would like to switch are hesitant to do so due to the complexity involved and the high egress costs their current storage service imposes.

To address these challenges, Wasabi has partnered with Cloudflyer to help customers move data quickly and easily. Cloudflyer allows current AWS S3, Microsoft Azure, Google Cloud and other S3 compatible cloud storage customers the option to get out of high-cost storage and eliminate on-going egress fees by moving to Wasabi cloud storage.

To migrate data as fast as possible, Cloudflyer and Wasabi utilize direct, high-speed connectivity to AWS and other popular cloud storage services. These private network connections can move data at up to 100 Gbps, avoids internet latency and bottlenecks, and provides fast and predictable performance. Cloudflyer users can move up to 20 million files per day.

## Immediate Return on Investment

Once migrated to Wasabi’s cloud, customers can expect to save up to 80% on storage costs compared to Amazon S3, Azure Hot, and GCP Standard. This means that AWS S3 users paying \$0.023 GB/mo. and egress charges, will be saving money in as little as a month and a half. Migrating a petabyte of data from AWS S3 can save a customer close to \$200,000 in storage charges in the first year.

## KEY FEATURES

---

- Seamless integration and unified administration and management
- Drag and drop simplicity
- Centralized view to monitor data migration process
- No setup required

## BENEFITS

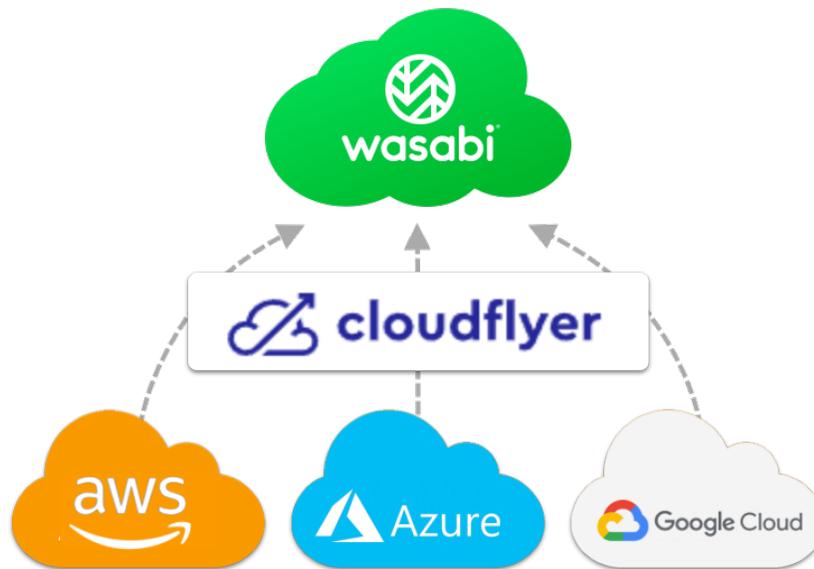

---

- Reduce storage cost and complexity
- Align storage costs with data value
- Eliminate cloud storage billing surprises
- Avoid administrative silos and simplify operations
- Protect and extend previous on-site storage investments
- Reduce risk and exposure due to data loss

## High Performance Architecture

Cloudflyer has a microservices based architecture that integrates the most cutting-edge technologies available for use in the public cloud. It is designed using serverless compute, automation services, and auto scaling mechanisms that allow for moving files, objects, and buckets at the highest speeds possible.

Cloudflyer is the optimal way to migrate data to Wasabi; helping users to take advantage of lower cost storage as quickly as possible and start saving money.

### ABOUT WASABI

Wasabi provides simple, predictable and affordable hot cloud storage for businesses all over the world. It enables organizations to store and instantly access an unlimited amount of data at 1/5th the price of the competition with no complex tiers or unpredictable egress fees. Trusted by tens of thousands of customers worldwide, Wasabi has been recognized as one of technology's fastest-growing and most visionary companies. Created by Carbonite co-founders and cloud storage pioneers David Friend and Jeff Flowers, Wasabi is a privately held company based in Boston.
