Protecting Critical Data From Disasters with Arcserve and Wasabi

We are living in a golden age of data with more being created in the last two years than the entirety of human history. Spread across a myriad of systems and applications that span the globe, this data represents IT's greatest challenge: managing it all securely and efficiently.

Arcserve, now validated interoperable with Wasabi, offers a suite of integrated products to tackle the growing data needs of organizations of all sizes with scalable capabilities to protect any type of workload. Together with Wasabi, Arcserve customers can take advantage of Wasabi's hot cloud storage for improved economics and performance, saving 80% over AWS with no fees for egress or API requests.

Arcserve UDP

Arcserve Unified Data Protection (UDP) is a data protection tool that is as powerful as it is easy to use. It collects an organization's disparate data under a single interface, allowing users to back up, access, and restore all data whether on-prem, remote, or in the cloud.

Arcserve UDP allows users to easily scale hybrid business continuity topologies, locally or over long distances with multiple sites, including Wasabi. Once data is stored, it is simple to move, replicate, and restore from any location. For this reason, among others, Arcserve UDP is the ideal platform for organizations implementing a hybrid cloud strategy.

Arcserve Appliances Secured by Sophos

Companies looking for all-in-one backup, disaster recovery and cybersecurity can leverage Arcserve's Appliance Series. Powered by Arcserve's UDP software and Sophos Intercept X Advanced, the appliances combine flash-accelerated deduplicated storage, robust server processing and high-speed networking with proven threat prevention technologies, highly-redundant hardware and cloud services.

They're ideal systems that remove the need to source discrete components of a whole solution by delivering a central interface for backup and security processes, tools, and infrastructure.

And, using the appliance, data can be replicated to Wasabi's cloud over WAN for increased redundancy and protection. Data on Wasabi's cloud can then be accessed for granular restore or DR purposes without fear of accruing egress charges.

Arcserve Backup

Magnetic tape has been a data center staple for decades. Its low cost and excellent physical durability has made it the go-to choice for long term archival storage for everything from

Features

- › Prevent data loss and extended downtime across cloud, local, virtual, hyperconverged, and SaaS-based workloads using only one unified central management interface

- › Scale up and down on demand, and turn on and off capabilities without forklift upgrades or additional products

- › Anti-ransomware and malware-detection technology baked into Arcserve Appliance

Benefits

- › Bring efficiencies to your infrastructure by freeing up to 20x more storage capacity

- › Increase redundancy with replication to tape, local storage, and public cloud

- › At-a-glance access to all your data across mediums

computer backups to films. However, the rate of retrieving data from tape makes it incompatible with the modern digital world, and the total cost of ownership (TCO) of tape rises rapidly the more data is stored on it.

Arcserve Backup offers a centralized, streamlined take on tape backup. Through a single interface, users can monitor all backup activities, track volume, and manage data operations across all of their devices. Data can be backed up to Wasabi via disk-to-disk-to-cloud (D2D2C) operations to meet application-specific requirements. From there, data can be accessed for rapid restore or retrieval, all without any fees for egress or API requests.

Wasabi Hot Cloud Storage Delivers Breakthrough Economics and Performance

Wasabi was specifically conceived to make cloud storage a commonplace utility like electricity. Unlike legacy cloud storage services with confusing storage tiers and complex pricing schemes, Wasabi hot cloud storage is extremely easy to understand and incredibly economical to scale. One product, with predictable and straightforward pricing, supports every cloud storage application running the S3 API, which has become the de facto standard for storage apps.

Wasabi is 80% cheaper than Amazon S3, with no egress fees or API charges. A highly parallelized system architecture delivers breakthrough performance, so you can rapidly move data in and out of the cloud at no additional cost.

About Arcserve

Arcserve provides exceptional solutions to protect the priceless digital assets of organizations in need of full scale, comprehensive data protection. Established in 1983, Arcserve is the world's most experienced provider of business continuity solutions that safeguard every application and system, on every premises and every cloud. Organizations in over 150 countries around the world rely on Arcserve's highly efficient, integrated technologies and expertise to eliminate the risk of data loss and extended downtime while reducing the cost and complexity of backing up and restoring data by up to 50 percent.
