

Simple Low-Cost GitHub Backup Automation with Cloudback and Wasabi

Overview

As enterprises continue to rely on third-party software and services in the course of daily operations, data security often falls by the wayside. These applications are vital to the continuation of business yet do not provide their own systems for backup, leaving a gap in their overall security.

Cloudback is an easy-to-use service for recurring GitHub repository backups. It provides the most comprehensive backup of GitHub on the market. While it is easy to use, it is still flexible - you can configure schedules, retention policies, and your own external storage, including Wasabi. Cloudback lets you create on-demand backups with just one click. You can download any backup to your PC or restore to any of your GitHub accounts. It supports instant notifications via major messengers like Slack, Microsoft Teams, and Discord. The support team is responsive and answers all your questions within 12 hours.

Wasabi Hot Cloud Storage Delivers Breakthrough Economics and Performance

Wasabi is the hot cloud storage company delivering low-cost, fast, and reliable cloud storage on-demand. Wasabi's solution is 80% less expensive and is faster than first-generation cloud vendors. Wasabi hot cloud storage is designed with eleven nines (99.999999999%) of object durability and data immutability that guarantees stored objects cannot be deleted or modified by anyone. Not only is Wasabi 80% less expensive to store data than traditional cloud providers, but there are also no fees for egress or API requests. Wasabi keeps all data "hot" so it can be accessed in milliseconds. All Cloudback and Wasabi customers can treat their data as hot data, so they can shorten upload windows and quickly access their data for faster restore times.

KEY FEATURES

- Support for a wide range of external storage options
- Instant restore of repository into any account
- Instant notifications for corporate messengers
- Flexible schedule and data retention policies
- Support for data deduplication

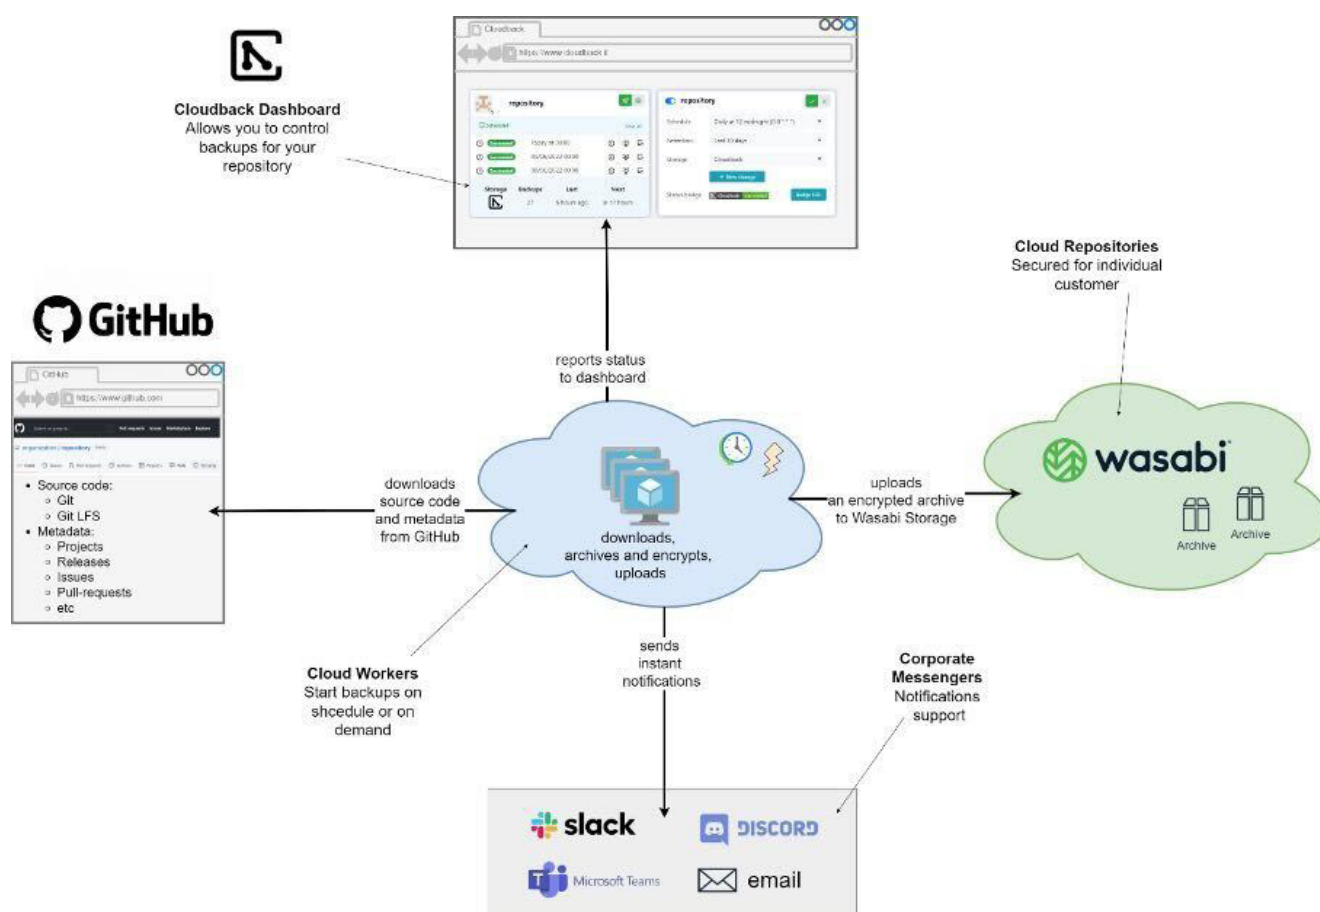

BENEFITS

- Reduce complexity - the easiest configuration in the market
- Reduce cost of ownership - storage prices as low as never before
- Reduce mean time to restore - accelerate restore operations
- Manage access using GitHub's membership for organizations

Combine Wasabi and Cloudback for Affordable GitHub Backup

Migrating Cloudback's internal storage to Wasabi allows customers to bring all encrypted archives under their control, increasing overall security. This puts the user in control of managing archive access, rather than a third-party company.

If you are an existing Cloudback customer using external storage from a major cloud storage provider such as Azure or Amazon, migrating to Wasabi will significantly reduce the price of your storage. Wasabi's hot cloud storage is one-fifth the cost of Amazon S3 with no fees for egress, ingress, or API requests, making already affordable storage even more so with predictable monthly costs.

ABOUT WASABI

Wasabi provides simple, predictable and affordable hot cloud storage for businesses all over the world. It enables organizations to store and instantly access an unlimited amount of data at 1/5th the price of the competition with no complex tiers or unpredictable egress fees. Trusted by tens of thousands of customers worldwide, Wasabi has been recognized as one of technology's fastest-growing and most visionary companies. Created by Carbonite co-founders and cloud storage pioneers David Friend and Jeff Flowers, Wasabi is a privately held company based in Boston.
