

SureDfend™ H

PRESERVATION CHEMISTRY

OVERVIEW

SureDfend™ H products are water soluble single-pack treatments for preservation, wet layup or mothballing applications. The combination of oxygen scavenger and persistent corrosion inhibitor/biocide eliminates corrosion.

The chemistry should be injected directly into the fluid as the system is filled, minimizing the risk of subsequent oxygen ingress.

Test kits are available to measure residual product for determining any requirement for retreatment in case of extended lay-ups.

APPLICATIONS

- Effective protection against corrosion
- Combined treatment cocktail
- Can be used for preservation, wet layup or mothballing or pipelines and process facilities

FEATURES

- Can be dosed into potable water, seawater or produced water
- Single pack treatment
- Excellent thermal stability
- Test kits for residual product determination

BENEFITS

- Compatible with most water sources
- Eliminates requirement for multiple chemical storage and injection points
- Easy to store and use in typical Middle East conditions
- Eliminates potential integrity and operability challenges when the system is returned to service
- Effective long term mitigation of oxygen corrosion and microbial activity
