

SureDcon™ S

HYDROGEN SULFIDE SCAVENGER

OVERVIEW

SureDcon™ S is specifically designed to treat crude oil systems containing hydrogen sulfide (H₂S) and is also useful for scavenging mercaptans. It has a proven track record with vapor phase decontamination operations in process facilities. SureDcon S is water soluble with relatively good settling velocity in hydrocarbon streams. It is fast reacting, thus reducing treatment durations and it is also more effective than MEA triazine based scavengers.

SureDcon S should be fed continuously and injected as early as possible in order to maximize contact with hydrocarbon. For degassing and decontamination operations, the chemical is used in conjunction with other SureDcon products for effective cleaning of process equipment such as vessels, columns, exchangers and tanks.

APPLICATIONS

- Vapor phase decontamination
- H₂S and mercaptans scavenger for hydrocarbon streams

FEATURES

- Metal based scavenger
- Non-amine based chemistry
- Effective and fast acting

BENEFITS

- Water based and steam-based treatment options
- Non-corrosive to the process asset
- Reduces shut-down duration
- Used as a preventative or remediation treatment
