

SureDcon™ D

DECONTAMINATION SURFACTANT

OVERVIEW

SureDcon™ D helps disperse and remove crude oil and other petroleum-based fluids from refinery equipment and pipelines. The surfactant can penetrate and soften heavy refinery deposits, which makes them easier to remove, meaning remedial hydrojetting can be reduced or eliminated.

The hydrocarbon and water phases readily separate for reprocessing or disposal when the solution is drained. In most cases, aqueous waste can be disposed through existing in-plant facilities without troublesome system upsets.

APPLICATIONS

- Recirculation based decontamination of process facilities
- Decommissioning of process plants and pipelines
- Decontamination, cleaning or de-oiling of pipelines

FEATURES

- Bio-degradable and non-flammable chemistry
- No emulsions
- Very low COD and BOD and residual hydrocarbon content in the effluent
- Neutral pH

BENEFITS

- Easy to transport and use at high temperatures
- Added value from hydrocarbon recovery
- Faster and more effective than steaming without chemistry
- Disposal costs can be reduced because of cleaner phase separation
