

SureDsolv™ E

EMULSION PREVENTION AND REMOVAL

OVERVIEW

SureDsolv™ E products have a non-emulsifying property to help prevent, reduce and break down emulsions in transportation, storage and processing facilities. They can be applied to aqueous treatment fluids and have been specifically designed to work across a broad spectrum of crude oils.

SureDsolv E also has products that contain a blend of surfactants that can be dosed into hydrocarbon streams, designed to help break water blocks and remove crude-oil emulsions. This is commonly used to remove oil-external emulsion blocks where aqueous based treatments will not work.

APPLICATIONS

- Provides non-emulsification properties with a broad range of crude oils
- Oil based treatment works on a broad range of crude oil emulsified with brine
- Can be used for low temperature pipeline applications as well as high temperature process applications

FEATURES

- Emulsion prevention
- Compatible with other additives
- Reduces interfacial tension

BENEFITS

- Helps fluids maintain their surface compatibility
- Products easy to transport, store and use
- Added value from hydrocarbon recovery
- Can be added at any point during most treatment fluid preparation procedures
