

# SureDfend™ P

PARAFFIN INHIBITOR

## OVERVIEW

SureDfend™ P oil soluble paraffin inhibitors work by altering the structure of the wax, decreasing its ability to cluster and adhere to steel surfaces of tubing, flowlines and surface treating equipment. This enhances oil production which has been limited due to flow restrictions caused by paraffinic accumulations.

These inhibitors help prevent wax precipitation in most crude oils to avoid expensive remediation options.

### APPLICATIONS

- Inhibits paraffin deposition and accumulation
- Can be used for pipelines where the operating temperature is below the wax appearance temperature of the crude oil

### FEATURES

- Soluble in aromatic solutions
- Contains wax crystal modifiers
- High flash point products available

### BENEFITS

- Improves oil production and flow that has been restricted due to paraffinic accumulation
- Cost effective prevention treatment to avoid expensive remediation options
- Compatible with most production chemicals
- Easy to transport
