

# SureStart™ T

## HYDROTEST COCKTAILS

### OVERVIEW

SureStart™ T products are water soluble single-pack treatments for hydrotesting of pipelines and process piping or storage tanks. The combination of oxygen scavenger and persistent corrosion inhibitor/biocide eliminates corrosion and provides effective preservation of anaerobic fluids. The products are suitable for typical test fluids including potable and surface waters and seawater.

Treating rates are based upon total fluids, taking into account the likely duration of the hydrotest and following preservation if needed. Test kits are available for measuring residual product for determining any requirement for retreatment in case of extended lay-ups.

#### APPLICATIONS

- Effective protection against corrosion
- 3 in 1 hydrotest cocktail
- Can be used for hydrotesting, wet layup or mothballing of pipelines and process facilities

#### FEATURES

- Compatible with potable, seawater or produced water
- Single pack treatment
- Excellent thermal stability
- Mitigation of oxygen corrosion and microbial activity

#### BENEFITS

- Minimal equipment footprint
- Eliminates requirement for multiple chemical storage and injection points
- Easy storage and use in typical Middle East conditions
- Eliminates potential integrity and operability challenges when the system is returned to service
