

SureDscale™ C

CALCITE AND SIDERITE SCALE DISSOLVER

OVERVIEW

SureDscale™ C offers effective dissolution of calcite (CaCO_3) or siderite (FeCO_3) scale or minerals. Under normal conditions the chemistries can be used up to 80°C and, under appropriate conditions, to higher temperatures. Due to extremely varied chemical profile, they are applicable for use in both pipelines and process facilities.

SureDscale C dissolvers offer an effective alternative to removing carbonate-type scale under a broad range of conditions, minimizing the safety risks and corrosion damage to the asset.

APPLICATIONS

- Fast acting scale dissolvers for calcite (CaCO_3) or siderite (FeCO_3) scale or minerals
- Applicable for scale removal from pipelines and process facilities

FEATURES

- Fast-acting chemistry
- Non-corrosive towards most oilfield metallurgies
- Non-hazardous products
- Formulated with a low emulsion tendency surfactant

BENEFITS

- Eliminates long soak times
- Safer treatment compared to acid based solutions
- Easy to store, transport and handle
- Efficient dissolution of oil-wet scale deposits
- Compatible with most commonly used elastomers
- Very effective in both high and low temperature applications
