

DID YOU KNOW

ALLOWING HIGH-RISK WORK WITH NO PERMIT IS RISKY BUSINESS.

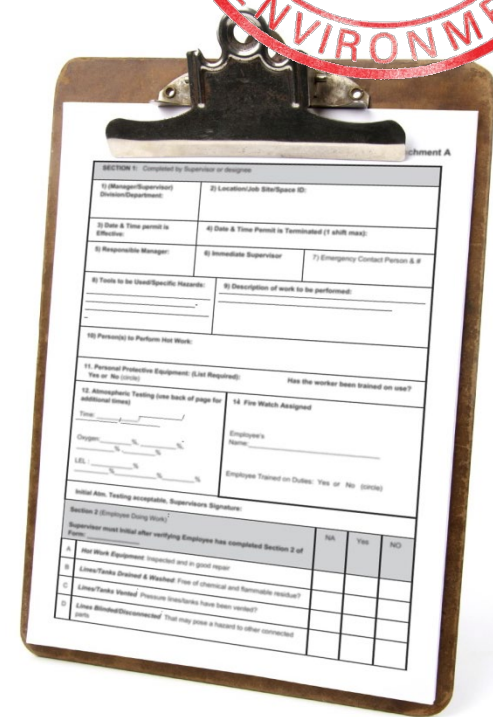

For non-routine high-risk activities such as grinding and welding, or working in confined spaces that pose chemical or atmospheric hazards, a facility-issued permit to work is a “must have.”

Before starting any non-routine, high-risk work, it’s always wise to perform a risk assessment and then use controls to eliminate or mitigate identified risks. Only then—and with a valid permit to work approved and signed—should workers begin. And of course, if those assigned to the task don’t fully understand the permit to work guidelines and parameters, questions should be dealt with immediately.

At Halliburton, solving customer challenges is second only to keeping everyone safe and healthy.

Work Authorization

The Halliburton Life Rules are a set of core factors that affect personal safety that all Halliburton employees know and live by. These are key components for identifying and managing the hazards in our business.
