User Guide for Safety Gloves CUT-D

Safety Gloves CUT-D are seamless, knitted gloves of HPPE fiber (High Performance Polyethylene) and steel fiber with polyurethane coating on the palm. The gloves offer a high level of protection against cuts, punctures and tears, as well as excellent comfort and dexterity. The gloves are suitable for use in building and construction, transport and warehousing, the automotive industry, appliance manufacturing and intricate assembly.

Size and fit: The gloves are intended to protect the hands during work in accordance with EN 388:2016+A1:2018 and EN ISO 21420:2020. Choose correct size to optimize safety and performance.

Storage and transport: Store in a dry place and in original packaging.
Avoid direct sunlight.

Inspection before use: Check the gloves (both new and used) before use to ensure there is no damage. A damaged product does not give optimal protection and should be discarded. If in doubt, discard the gloves and choose a new pair.

Obsolescence: Service life of the gloves cannot be specified since it depends on many factors, such as use and storage conditions.

Donning/doffing: Choose correct glove size. Hold the glove by the cuff with one hand. Straighten the thumb of the glove. Insert the other hand into the glove and pull on the cuff. Use the same procedure with the other glove. Remove gloves by pulling on the fingertips. If the glove is dirty, take it off it by pulling on the cuff.

Maintenance/cleaning: The user is responsible for cleaning the gloves after use, as unknown substances may weaken the product and its performance. It is recommended that the glove is rinsed in cold water, or wiped with a wet cloth, and hung to dry in room temperature. Cleaning and disinfection of the glove may lead to deterioration in quality. The performance capacity of used/washed/disinfected/cleaned gloves may differ from the test results.

Please note: It is the user's responsibility to check the suitability of the glove for the intended use, and to evaluate and determine risks based on the intended area of use. The gloves should be used only for tasks intended by the manufacturer. Risks must be evaluated according to the specified protection levels and the harmonised standards for which the gloves have been tested. The gloves should not be used when there is risk of getting entangled in moving machine parts. No material known to be harmful to users has been utilized in these gloves or their manufacturing process. In case of hypersensitivity reaction, discontinue use. Contact Mirka for further information.
