

DATA SHEET

# E2open Transportation Management

**Connected transportation management that helps shippers control costs, improve service, and scale operations across all modes and regions.**

**Today's supply chain leaders face volatile rates, capacity constraints, and disruptions that can derail service commitments faster than traditional logistics processes can respond.**

When transportation data lives in disconnected systems, teams spend too much time chasing updates, resolving exceptions manually, and reconciling freight charges after the fact. Shippers need a single way to plan, execute, and settle freight across modes and regions, backed by real-time visibility, so they can protect customer service while controlling transportation spend.

## Unified transportation management platform for end-to-end shipper control

**E2open Transportation Management (TMS)** is a comprehensive logistics management application for shippers that plan, execute, and pay for their own freight. It automates transportation activities end-to-end: planning and rating, execution, real-time visibility, settlement, analytics, and procurement—across domestic and international networks.

Powered by an extensive logistics network, the solution helps shippers access carrier capacity, benchmark rates and performance, and manage operations by exception using real-time dashboards, notifications, and alerts. Standardized workflows and automation reduce manual effort and improve consistency across regions and modes.

By combining planning, execution, freight financials, and sourcing in a single platform, teams can respond faster to disruptions, contain transportation costs, and scale logistics operations without adding headcount.

### Key features / Key capabilities

#### Carrier rating (negotiated + on demand)

Apply stored contracted rates and compare against market options when capacity is tight.

#### Real-time visibility, dashboards & alerts

Track shipments, surface exceptions, and manage by exception with configurable alerts and thresholds.

#### Transportation planning & optimization

Automate routing, consolidation, and load building to balance cost and service.

#### Freight audit, payment & invoice-less settlement

Automate validation and settlement to reduce cycle times, errors, and disputes.

#### Execution & carrier collaboration

Standardize booking/tendering and day-to-day execution across carriers, modes, and regions.

#### Network-based benchmarking & analytics

Benchmark rates and performance using network data to identify savings opportunities and service improvements.

## Key benefits

- **Control transportation spend** with better planning, rating, and benchmarking intelligence.
- **Improve service levels and reliability** by acting early on at-risk shipments and exceptions.
- **Increase end-to-end visibility** with real-time tracking, dashboards, notifications, and reporting.
- **Scale operations** without adding headcount through automation and standardized workflows.
- **Strengthen carrier relationships** with faster, more accurate settlement and improved collaboration.

## Build a scalable foundation for growth across modes and regions

By unifying transportation planning, execution, visibility, freight financials, and procurement into a single network-powered platform, e2open Transportation Management helps shippers run transportation as a strategic advantage. Teams can respond faster when conditions change, improve service performance, and make smarter spend decisions.
