

DATA SHEET

E2open Ocean Bookings

POWERED BY INTTRA

Simplify multi-carrier ocean bookings and required shipment-data exchange through one TMS-neutral connection.

Ocean execution gets complex fast when teams work across dozens of carriers, systems, and regions. Relying on carrier portals, emails, and spreadsheets slows booking cycles, increases errors, and makes it harder to meet documentation and regulatory cutoffs. And when disruptions occur, fragmented status updates limit visibility and delay corrective action. Supply chain and logistics leaders need a standardized, digital way to plan, book, exchange required shipment data, and track ocean moves across carriers, without adding more integrations or changing the way their teams work.

e2open Ocean Bookings Powered by INTTRA

E2open Ocean Bookings is the largest neutral, multi-carrier ocean network for planning and executing ocean shipments. It provides shippers, freight forwarders, and logistics teams with a single place to plan, book, submit shipping instructions, and exchange shipment data electronically across carriers, reducing carrier-specific complexity and manual transactions.

With standard web, API, or EDI connections, INTTRA integrates seamlessly into existing TMS and ERP workflows and scales across high-volume operations. Digital submissions and data validation help teams meet carrier cutoffs, reduce errors, and improve the speed and quality of Bill of Lading workflows. At the same time, real-time status updates and alerts support visibility and exception management across the shipment lifecycle.

Key features / Key capabilities

Rates

INTTRA is sourced directly from ocean carriers, and lets you compare and select the best option based on price and service. Book within a seamless workflow to eliminate manual rate lookups, reduce errors, and improve cost control.

Ocean schedules

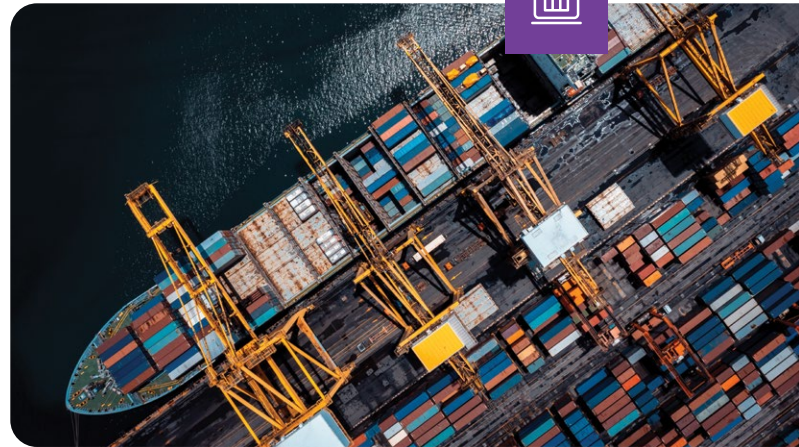

Plan and optimize shipments in real time. View routing options, transport legs, and cutoff dates (where available) to make faster, more informed booking decisions.

Multi-carrier booking (FCL, LCL, RoRo, breakbulk)

Execute bookings, confirmations, and amendments across carriers through one connection, reducing reliance on emails, phone calls, and carrier-specific portals.

Booking management

Manage bookings, changes, and confirmations in one place with automated updates, ERP/TMS integration, and access to spot rates and value-added services, reducing carrier- and country-specific complexities.

Cargo visibility

Powered by carrier-direct data, terminal feeds, and live vessel tracking, shippers receive timely, validated updates across every leg of the ocean journey. Whether integrated via API, exchanged over EDI, or accessed through the web, cargo visibility delivers precise, low-latency visibility across a vast global carrier network, enabling smarter decisions and faster response to supply chain disruptions.

Shipping instructions

Generate faster, more accurate Bills of Lading by automating data capture, validation, and compliance. Support Master & House BLs, Letters of Credit, and even non-participating carriers while reducing manual errors, ensuring regulatory compliance (including ISF and ICS2), and delivering real-time carrier acknowledgments to minimize disputes and prevent cargo rollovers.

Electronic Bills of Lading (eBL)

Manage electronic Bills of Lading alongside multi-carrier bookings in one secure platform. Instantly transfer or surrender eBLs with full legal recognition while eliminating delays, manual errors, and courier costs.

Carrier performance analytics

Dashboards report on shipment KPIs, including booking response times, shipment reliability, dwell time, and status events performance, to help shippers maximize ocean shipping efficiency with actionable insights to improve time-to-market commitments.

Bill of Lading data (BL data & BL image)

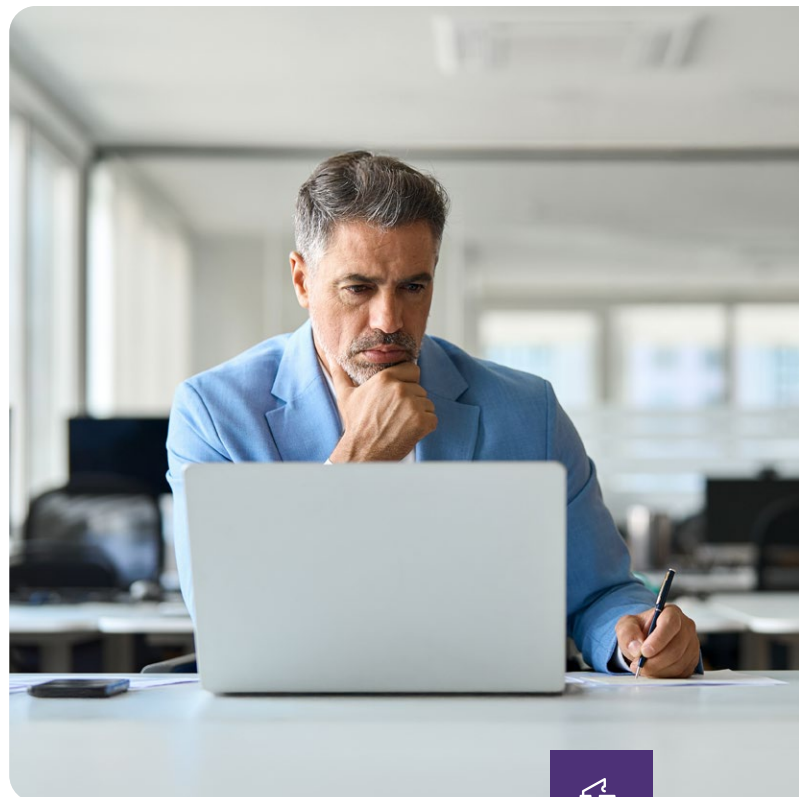

Provide seamless PDF and structured data delivery between shippers and carriers, supporting the full draft-to-final BL process, eliminating manual entry, and maintaining a digital record of the contract of carriage. With ERP/TMS integration, automation-ready data, and real-time accuracy, shippers can accelerate documentation, ensure compliance, and streamline global trade workflows.

Trade compliance screening

Screen all bookings against a comprehensive global content library, alerting users to potential threats without disrupting the booking process. Submit compliant data on time to help users stay compliant and avoid delays, penalties, and costly fines.

eVGM

Submit Verified Gross Mass (VGM) data quickly and accurately across multiple carriers with a fully electronic eVGM solution. With instant carrier acknowledgments, TMS/ERP integration, mobile access, bulk submission, and audit-ready reporting, shippers reduce manual effort and prevent rollovers.

Key benefits

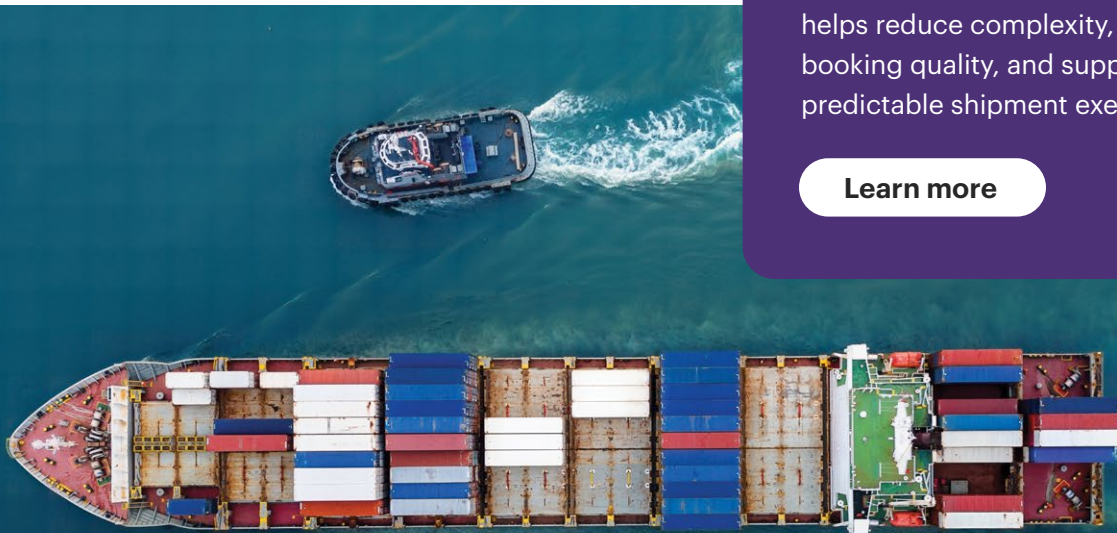

- Reduce manual work by replacing carrier portals, emails, and spreadsheets with standardized digital ocean execution.
- Improve booking speed and execution quality with faster confirmations and fewer data-entry errors.
- Strengthen compliance and reduce delays by submitting required shipment data accurately and on time.
- Increase visibility and control with timely status updates, alerts, and exception management across the shipment lifecycle.
- Scale reliably with one reusable, TMS-neutral connection to a broad carrier community reducing onboarding and integration burden.
- Shorten document cycles and improve control by managing legally-recognized electronic Bills of Lading in one platform, reducing delays, errors, and dependency on physical documents.

The business impact

By standardizing multi-carrier ocean execution on a single network, e2open Ocean Bookings helps teams reduce operational overhead, improve data accuracy and compliance, and strengthen resilience when conditions change. The result is more predictable ocean logistics, supported by a high-availability, global-scale network that enables faster decisions, fewer disputes, and better control across bookings, documentation, and in-transit execution.

Bring consistency and control to your ocean operations. Contact us to learn how e2open Ocean Bookings helps reduce complexity, improve booking quality, and support more predictable shipment execution.
