

Logistics Suite

Connect to a vast carrier network to plan, book, ship and track

Today, moving goods and materials from one point to another requires a well-planned strategy and careful coordination from planning to execution. Efficient, agile networks call for fast, intuitive and easy-to-use execution tools, whether an organization uses ocean, air, rail, road or a combination of these. By planning, executing and tracking multimode shipments on a single platform, companies can centralize and standardize their processes, optimize shipping costs and deliver superior customer service.

Moving Goods With Efficiency

Shipping capacity limits, higher costs, demands for faster distribution and the need for real-time visibility are making transportation management more critical now than ever. Based on the most robust consolidated platform for planning and executing global transportation across all modes, e2open®'s Logistics suite has been proven to help companies ship goods faster while reducing costs and risks. Shippers can plan their transportation

needs, book capacity, track progress in real time and ensure invoice accuracy, all from one sophisticated transportation management system (TMS).

Meeting Every Need With a Single Logistics Platform

Now companies of any size can manage all aspects of transportation planning, optimization, booking, tracking and payment processing on one platform. Cross-functional, cross-enterprise and cross-ecosystem integration helps shippers respond to challenges and remove silos. Control tower capabilities move business leaders from basic track-and-trace to a deeper understanding of how missed milestones will impact the business and what corrective actions to take.

Connecting Domestic and International Providers

Companies using e2open's applications gain access to the industry's largest community of ocean, air, rail, truck and parcel carriers, in addition to freight forwarders and many leading logistics service providers. More than 25% of global ocean trade is moved annually on the e2open platform. The network also includes 61,000 suppliers and contract manufacturers for electronic collaboration. These existing connections reduce the need to invest time and money to integrate with new carriers for additional modes or regions.

“E2open has enabled us to differentiate our logistics services with a powerful solution that has significantly improved customer satisfaction and contributed to growing our business internationally.”

Global Marine and International Logistics Services
Global Logistics Provider

Applications

Transportation Forecasting

Plan transportation with the same sophistication as finished goods, incorporating promotional and seasonal sales surges by accurately forecasting your logistics needs.

Global Parcel

Ship and track packages across the globe with a single integrated platform for labels, manifesting and tracking, selecting the optimal carrier and service.

Transportation Management

Simplify and optimize logistics activities with a single application for planning, carrier procurement, execution and settlement — across all modes and regions.

Bookings

Book directly with carriers based on routing, service and transit times. Prepopulate booking requests with instructions and service details to simplify operations.

Logistics Visibility

Visibility For All™ — all modes, all legs and all regions. All companies gain access to real-time data and dashboards to identify the location of shipments.

Vehicle Routing and Scheduling

Automate your planning, loading and routing processes, optimize driver-vehicle utilization and improve on-time delivery performance to increase client satisfaction.

Audit and Settlement

Reduce the time required for freight audits and save 1% to 4% of total logistics spend with a smooth, automated process to ensure accuracy before paying.

Equipment Management

Minimize container handling and equipment costs. Improve efficiency by eliminating empty runs and port wait times as you lower your carbon footprint.

Global Logistics Orchestration

Real-time visibility into shipments is just the beginning. Understand the impact of delays on downstream operations and put decisions into action — all from one place.

About e2open

At e2open, we're creating a more connected, intelligent supply chain. It starts with sensing and responding to real-time demand, supply and delivery constraints. Bringing together data from customers, distribution channels, suppliers, contract manufacturers and logistics partners, our collaborative and agile supply chain platform enables companies to use data in real time, with artificial intelligence and machine learning to drive smarter decisions. All this complex information is delivered in a single view that encompasses your demand, supply and logistics ecosystems. E2open is changing everything.
