

Revolutionizing Transportation Management for Shippers

Unlock greater efficiency and cost savings with e2open's solutions

Businesses often face constant challenges in optimizing supply chain operations while minimizing costs. With e2open Transportation Management, shippers gain access to cutting-edge tools and insights that drive informed decision-making, operational efficiency, and sustainability.

Explore e2open's key benefits and innovations to transform your logistics strategy.

Leverage AI-enabled network rate benchmarking

► What it is:

Access insights from \$18 billion in transportation spend across the e2open TMS network to benchmark your rates against network peers.

► The value:

Negotiate competitive carrier rates and avoid overpaying by comparing your contracts and executed payables with broader network trends, improving transportation budgeting and efficiency.

Integrate third party data solutions into key workflows

► What it is:

Seamlessly incorporate risk and energy information such as real-time visibility and predictive ETA, compliance monitoring, and fuel/energy indices into purpose-built user workflows.

► The value:

Enhance data driven decision-making with integrated tools, such as:

- *Freight Carriers Association of Canada (FCA) Fuel Index* for FSC calculation
- *RMIS* for compliance monitoring of transportation carriers
- *Samsara Telematics* for private fleet management
- *Breakthrough Fuel API* for FSC estimate at time of planning
- *Shipment visibility*
- *INTTRA API* for most up-to-date sailing schedule details
- *FreightWaves* for TRAC and SONAR benchmarking data

Logistics Visibility

► What it is:

Gain accurate, enriched, real-time insights and predictions for shipments in transit by connecting to a global network of shippers, suppliers, and 228,000+ carriers covering all transport modes.

► The value:

Shipment visibility data enables shippers and LSPs to anticipate and manage transportation risks, optimize personnel efficiency and cash flows, reduce extra freight costs, improve supply chain planning, manage carbon emissions, and increase customer satisfaction.

Simplify container load planning

► What it is:

Automatically determine the optimal type and quantity of containers needed for transport orders to simplify ocean carrier bookings.

► The value:

Reduce errors and delays by automating container selection, ensuring timely shipments and efficient capacity utilization.

Optimize API connectivity for real-time data exchange

► **What it is:**

Reusable connectivity between carriers and their operating platforms and the e2open TMS, enabling real-time quote to invoice collaboration.

► **The value:**

Automate routine tasks, improve data accuracy, and enhance operational productivity for all transportation milestones across shipper and carrier users.

Boost sustainability and efficiency with pallet stackability

► **What it is:**

Maximize transportation equipment use by integrating pallet stackability into planning logic.

► **The value:**

Advance sustainability goals while reducing freight costs by fully utilizing space and cutting down on equipment needs.

70+

carriers provide autonomous on-demand quotes embedded in dynamic routing guides and rate shop workflows

Enhance spot rating with advanced technology

► **What it is:**

Real-time autonomous quoting workflows to enable shippers and carriers to match capacity with demand in real time, at market rates, through on-demand quoting or reverse auction capabilities. 70+ carriers provide autonomous on-demand quotes embedded in dynamic routing guides and rate shop workflows, while 100+ carriers provide autonomous on-demand reverse auction quotes. Shippers reverse auction experience improved to enable a more intuitive and autonomous bid review and award process.

► **The value:**

Secure the best freight rates by quickly comparing bids, evaluating cost-effectiveness, and selecting the best carrier for capacity needs in an efficient and collaborative environment.

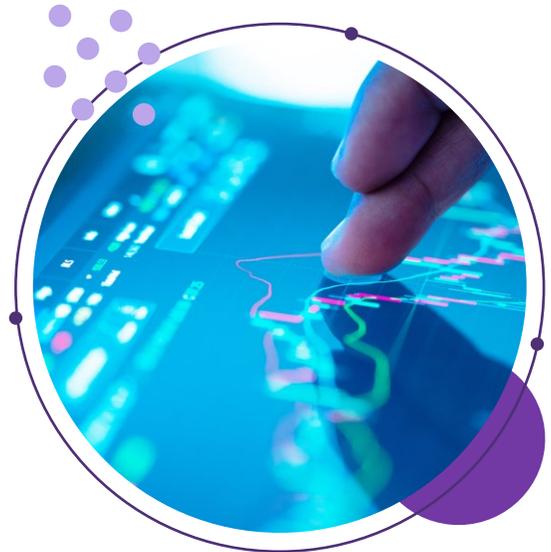

Streamline multi-pay party processes

▶ **What it is:**

Centralize payables for multiple service providers within a single platform.

▶ **The value:**

With a single source of truth for all payables related to transport, shippers can now better control the total cost of transport along with reducing inefficiencies, errors, and potential late payments.

Revolutionize your logistics strategy today

Leverage e2open Transportation Management to gain decision-grade insights, optimize operations, and drive better business outcomes.
