

DATA SHEET

Global parcel: Control cost, service, and complexity

The challenges of shipping

Today's shippers face increasing parcel costs, expanding carrier networks, growing customer expectations, and increasingly complex global shipping requirements. Managing multiple carriers, service levels, compliance regulations, and high shipment volumes across disconnected systems creates operational inefficiencies and limits visibility.

Simplify parcel execution at scale

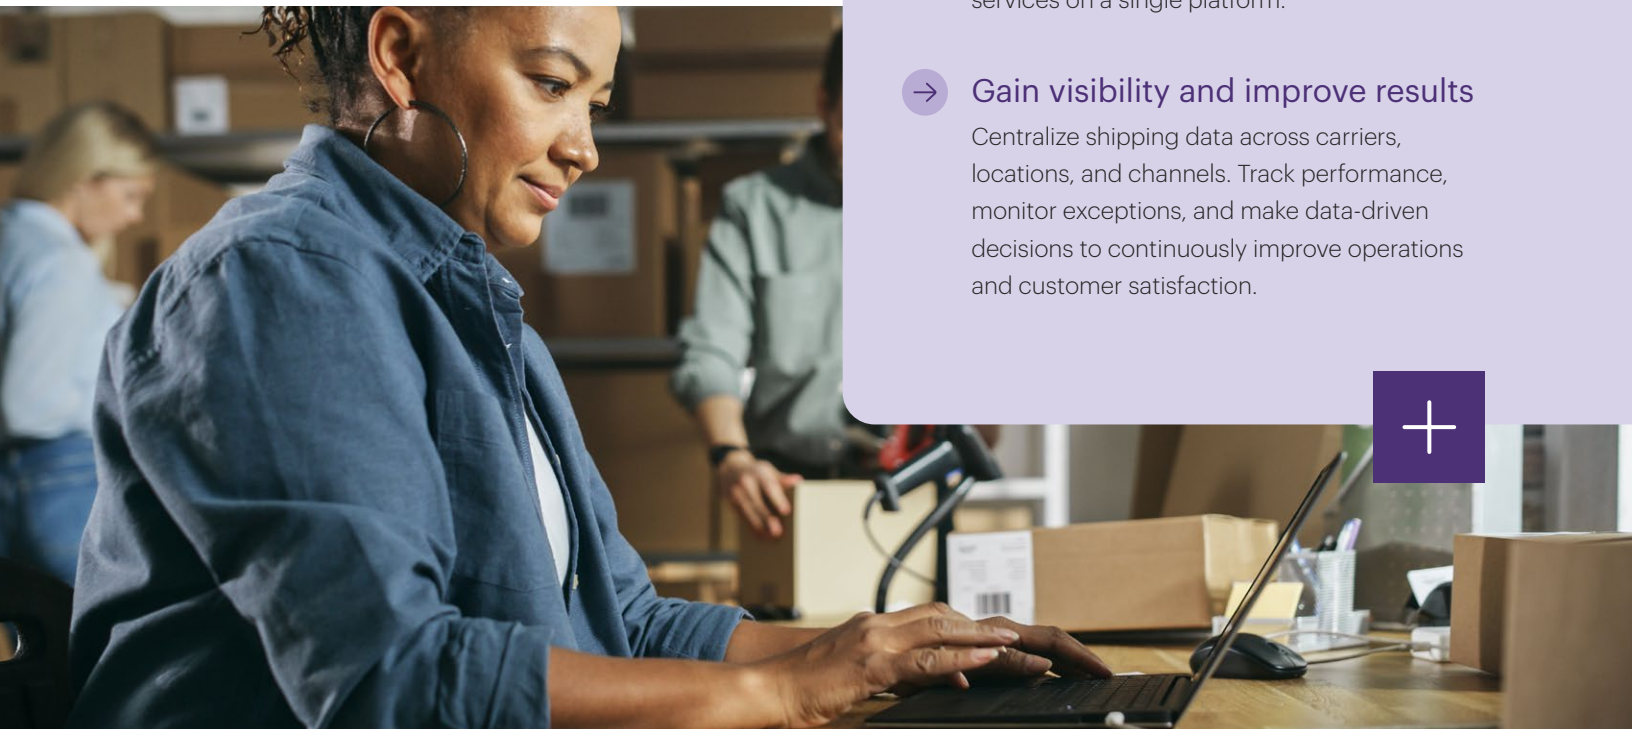

Global Parcel brings together the capabilities organizations need to control parcel cost, service, and complexity across the enterprise. Connect shipping processes across carriers, locations, and workflows; automate high-volume execution; optimize carrier and service selection; manage global shipping requirements; and gain greater visibility from shipment creation through delivery and returns.

Key capabilities

- Execute across multiple carriers
- Optimize carrier, service, and rate selection
- Automate high-volume shipping workflows
- Manage international shipping and compliance
- Orchestrate returns and customer self-service
- Track shipments and manage exceptions end to end

Key benefits

- **Lower total cost to ship**
Automatically rate shop across carriers, services, and even parcel and LTL to select the most cost-effective option. Leverage intelligent packaging recommendations to optimize box size and reduce spend.
- **Automate and scale with confidence**
Streamline every step of the shipping process with APIs and automated workflows. Process thousands, or millions, of shipments with no manual touch and minimal exceptions.
- **Manage complexity globally**
Handle international shipments, hazardous goods, export documentation, returns, multi-piece shipments, and carrier special services on a single platform.
- **Gain visibility and improve results**
Centralize shipping data across carriers, locations, and channels. Track performance, monitor exceptions, and make data-driven decisions to continuously improve operations and customer satisfaction.

5 easy steps

1 Connect

Integrate with your ERP, WMS, OMS, scales and other systems, or use APIs to enable end-to-end automation.

2 Rate and select

Compare real-time rates and transit times across carriers and services to automatically select the best option based on cost, service level, or business rules.

3 Ship

Generate labels and documentation, tender the shipment, and manifest with the carrier – all within a streamlined workflow.

4 Track and manage

Monitor shipment status in real time, proactively manage exceptions, and reprint documents or labels as needed.

5 Engage customers

Provide branded tracking, self-service returns, return label generation, and pickup scheduling to deliver a better customer experience.

Built for every shipper

- Warehouses and distribution centers
- Retail stores and omnichannel fulfillment
- Suppliers and partners
- Desktop shipping
- Customer self-service

Global Parcel simplifies parcel shipping by centralizing multi-carrier execution, automating shipping workflows, optimizing carrier and service selection, and providing end-to-end visibility, enabling businesses to reduce costs, improve operational efficiency, and deliver a better customer experience at scale.

Take control of every parcel.
Discover how Global Parcel can help you optimize costs, simplify complexity, and execute shipping at scale.
