

The World's Most Connected, Multi-Carrier, TMS-Neutral Ocean Network

For over 20 years, INTTRA has been the largest multi-carrier ocean network, bringing shippers and ocean liners together to improve the efficiency of moving products from A to B. Day in, day out, INTTRA demonstrates its reliability and resilience at global scale, orchestrating more than **600 million transactions** every year between **80,000+ shippers** and **100+ ocean carriers and NVOCCs** across **130 countries**.

Our mission is the **100% digitization of the ocean industry** through expanded process coverage. As the platform continues to evolve, we will address regulatory changes and support shifting data standards, while giving shippers flexible connection options and the ability to integrate with any TMS solution. The Ocean Network remains a high-availability platform backed by global support, efficiently managing more than **20,000 support queries** annually.

The power of the INTTRA ocean network

20+ years as the neutral industry standard for electronic messaging in global ocean shipping.

A single, cost-effective connection that enables any shipper or software provider to integrate with INTTRA across all TMS platforms.

Real network

One connection to carriers

Access the largest network of carriers without managing multiple point-to-point connections.

Flexible & scalable

Seamlessly handles countryspecific and carrier-specific variations.

High volume, bi-directional data flow

More than 80% of transactions process in real-time via API/EDI.

Standard & custom integration

Pre-built EDI/API interfaces with customization options.

Seamless new carrier onboarding

No additional testing required to onboard new carriers.

Web access for lower-volume shippers

Easy-to-use web workflows for more infrequent shippers.

Proven & trusted

20+ years of evolution, processing 40%+ of global ocean shipments reliably.

Compliance

Standard compliance

Aligns with DCSA messaging standards and global data sources like UNECE, WCO, and ISO.

Regulatory upgrades

Continuous interface updates to meet evolving regulations like EU ICS2.

Carrier-specific validations

Ensures accurate data processing based on carrier requirements.

Infrastructure

Reliable & resilient

Fully managed infrastructure with active contingency plans.

Industry standard support & uptime

Proven availability of 99.7% backed by round-the-clock support.

Secure & private

Strong data security and privacy protections in place.

Both shippers & carriers benefit using INTTRA

Both shippers & ocean carriers benefit by leveraging the e2open Ocean Bookings

Shipper (BCOs & FF)

One connection

Connect instantly with ~150 carriers and NVOCCs without the need for carrier-specific certification.

Flexible integration options

Supports EDIFACT, XML, X12, flat files, CSV, JSON.

Comprehensive ocean shipment coverage

Efficiently manage end-to-end processes between shippers and carriers.

Reduce manual work & errors

Automate workflows to eliminate repetitive tasks and enhance accuracy.

Real-Time shipment visibility

Get instant tracking updates for better decision-making and reduced delays.

Simplify customs compliance

Stay ahead of country-specific regulations without extra effort.

Reliable & scalable infrastructure

Fully managed with active contingency plans for uninterrupted service.

Ocean carrier (VOCC & NVOCC)

Centralized customer data

Access up-to-date shipper information in one place for streamlined interactions.

Competitive presence

Secure a seat at the table alongside industry leaders, staying visible to key shippers.

Broad shipper reach

Gain exposure to large, medium, and small shippers actively seeking carrier partnerships.

Seamless onboarding

No testing or separate integrations required for each shipper to connect instantly.

Improved data accuracy

Reduce manual data entry errors, ensuring better shipment information from customers.

Unlock new revenue streams

Showcase carrier-specific value-added services to drive additional business.

Reliable & scalable infrastructure

Fully managed with active contingency plans for uninterrupted service.

- E** Entry = eBL-focused
- C** Core = transaction reliability
- V** Value = full digital capability suite

Key features and capabilities

Ocean schedules

Smarter planning with real-time ocean schedules

Access the latest sailing schedules from leading ocean carriers — instantly. With over 20 million schedules across 250,000+ port pairs, INTTRA Ocean Schedules helps shippers plan and optimize shipments in real time. View routing options, transport legs, and cut-off dates (where available) to make faster, more informed booking decisions and keep your supply chain moving.

Spot rates*

Integrated rate access for cost-efficient ocean freight bookings

Take control of your ocean freight costs with INTTRA's spot rate access — right at the point of booking sourced directly from ocean carriers. Select the best option based on price and service, and book in one seamless workflow. This unified experience eliminates manual rate lookups, reduces errors, and improves cost control, empowering faster decisions and real savings on every container move.

Stay competitive by comparing quoted rates to freight index data (coming soon)!

* Rate availability is subject to carrier approval.

Trade compliance screening

Reduce compliance risks and ensure seamless ocean bookings

This non-intrusive process screens all bookings against a comprehensive global content library, alerting you to potential threats without disrupting the booking process. Allowing you to stay compliant, avoid costly fines, and optimize your supply chain.

Key features include:

Restricted partyscreening: Automated checks against over 680 government lists to prevent dealings with sanctioned entities.

Embargo and proximity checks: Identify risks associated with embargoed locations and conflict zones.

Dual-use goods screening: Assess shipments for sensitive materials that require special handling.

Real-time risk assessment: Display aggregate cargo threat risk with detailed insights, ensuring informed decision-making.

Audit trail: Maintain a one-year record of all screenings for compliance and regulatory purposes.

Key features and capabilities

Booking requests & confirmations

INTTRA booking: One platform. Every ocean booking.

Book ocean freight faster and more accurately across the world's largest carrier network — supporting FCL, LCL, Roll-on Roll-off, Breakbulk, and specialty cargo. Manage bookings, changes, and confirmations in one intuitive platform with automated updates, ERP/TMS integration, and access to spot rates and value-added services. INTTRA booking reduces carrier and country-specific complexities, cuts costs, and keeps your shipments moving efficiently.

Shipping instructions

Faster BLs, fewer errors, and built-in regulatory compliance

INTTRA shipping instructions helps shippers generate faster, more accurate bills of lading by automating data capture, validation, and compliance — all within a single, integrated workflow. Supporting master & house BLs, letters of credit, and even non-participating carriers, it reduces manual errors, ensures regulatory compliance (including ISF and ICS2), and delivers real-time carrier acknowledgments to minimize disputes and prevent cargo rollovers.

eVGM

Fast, compliant VGM submissions — made simple

Submit verified grossmass (VGM) data quickly and accurately across multiple carriers with INTTRA's fully electronic eVGM solution. With instant carrier acknowledgments, TMS/ERP integration, mobile access, bulk submission, and audit-ready reporting, shippers reduce manual work, prevent rollovers, and keep containers moving smoothly.

Cargo visibility

Gain unmatched visibility into ocean shipments

Powered by carrier-direct data, terminal feeds, and live vessel tracking, shippers receive timely, validated updates through the channel that best fits their workflow. Whether integrated via API, exchanged over EDI, or accessed through the web, cargo visibility delivers precise, lowlatency visibility at every leg of your ocean journey across a vast global carrier network, enabling smarter decisions, reduced manual tracking, and faster response to supply chain disruptions.

Key features and capabilities

Performance analytics

Maximize ocean shipping efficiency with actionable insights

Stay in control of every aspect of your shipping with a predefined set of reports including:

- **Booking detail report:** 360-degree view of all bookings, offering an overview to crucial information like transport plans, cargo details and container specifics with key tracking references to streamline shipment management. Also covers the latest reported milestone event for all associated containers on the status of your bookings.
- **Shipping instructions (SI) detail report:** 360-degree view of all your shipping instructions submitted via INTTRA. It provides visibility into compliance by tracking submission timestamps and carrier acknowledgments confirming receipt of your instructions. It captures submission timestamps to verify that critical information reached the carrier before the cut-off, preventing disputes.
- **Container status report:** detailed timeline of container movements, offering both a summary view of all containers with their last known milestone and a detailed timeline of every reported event from the ocean carrier. This helps to monitor container progress, anticipate potential delays, and improve your logistics planning.
- **Detention & demurrage report:** helps you anticipate potential issues before free time expires, leveraging preset timeframes to mitigate risks and avoid unnecessary charges. Calculations are based on unloaded event dates or vessel arrival dates, focusing on detention and demurrage events at the destination.

Bill of lading data (BL data & BL image)

Smarter, faster bill of lading PDF & data exchange

Simplify bill of lading exchange with seamless PDF and structured data delivery between shippers and carriers. Support the full draft-to-final BL process, eliminate manual entry, and maintain a digital record of your contract of carriage. With ERP/TMS integration, automation-ready data, and real-time accuracy, shippers can accelerate documentation, ensure compliance, and streamline global trade workflows.

Key features and capabilities

Electronic bills of lading (eBLs)

Digital trade documentation & simplified trade finance

Electronic bills of lading (eBLs) Boost supply chain resilience and streamline trade finance by managing electronic bills of lading alongside multi-carrier bookings in one secure platform. Instantly transfer or surrender eBLs with full legal recognition while eliminating delays, manual errors, and courier costs. eBLs are supported by global trade finance banks with enterprise-grade security to simplify document sharing for financing and enable real-time collaboration.

Carrier track & trace

Gain visibility across all cargo types and shipping modes

41% global container coverage with ~80 milestone events from ~90 carriers processing 2M+ events daily. Proactive event notifications keep all partners informed, while native ERP/TMS integration and API/EDI connectivity automate your operations seamlessly.

To proceed with bundle selection and activation, additional details are available through a secure access process. **Request access to review bundle details and complete the next steps with guidance from the INTRA team.**
