

# Turf Product Storage

Turf product works best when properly installed. If long term storage of a product needs to occur, please follow these best practices.

## Best Practices

- Turf product should be kept in a climate controlled space away from direct moisture or heat exceeding 80°F/26°C.
- Turf product should be stored in a neutral position, as shipped, without any additional weight on the product, or it may warp.
- Turf peel & stick adhesive-connection products must be kept dry; moisture could negatively affect the transfer paper backer that protects the adhesive prior to installation.
