

Halliburton Otis® R® Running Tool

The Halliburton Otis® R® Running Tool is designed to deploy and set sub-surface flow control devices equipped with R and RN® lock mandrels, landing in corresponding selective or no-go landing nipples.

The running tool can be set up to run devices either in selective or nonselective mode.

In the selective mode, devices can be run through landing nipples (R type—non no-go nipples) of the same size and type before the operator performs a manipulation at the desired location nipple and sets the device.

In the nonselective mode, the lock mandrel will locate the first corresponding nipple.

Halliburton Otis® R® Running Tool Technical Specifications
