

WELL COMPLETIONS | MULTILATERAL SYSTEMS

FlexRite® selective access (SA) multilateral completion system

Selective mechanical lateral access for multizone stimulation and intervention

FEATURES

- Selective mechanical lateral access
- TAML Level 5 pressure isolated junction
- Testable seal interfaces
- Industry-leading pressure ratings
- Suitable for new or existing wells

BENEFITS

- Maximize reservoir contact
- Extend well life
- Simplify well intervention operations
- Reduce well intervention costs
- Simplify multilateral well stimulation
- Increase production in depleted or low permeable zones

Overview

The FlexRite® selective access (SA) multilateral completion system is a TAML Level 5 pressure-isolated multilateral completion system. It delivers the industry's highest pressure ratings and can withstand the high loads expected from prop-frac stimulations to execute multilateral well strategies in complex reservoir conditions. The FlexRite SA system delivers well life versatility to multilateral installations through an innovative combination of stimulation capability and through-completion selective intervention.

Multilateral systems are deployed to maximize reservoir contact to reduce time, costs, and environmental impact. The FlexRite SA system builds on decades of Halliburton operational and technical excellence.

Robust, simple, and versatile, the FlexRite SA system is ideal for new multilateral developments or retrofit applications from deepwater to onshore operations, with future applications in recompletion operations. The FlexRite SA system can be used in conjunction with the Halliburton Advanced Completions portfolio, purposely engineered to improve reservoir management, enhance hydrocarbon recovery, and optimize production, to provide greater revenue potential and increased asset value.

Compatible with both new and existing wells using the XtremeGrip® MLT anchor system, the FlexRite SA junction builds on the Halliburton re-entry portfolio to enhance production enhancement potential in depleted or low-permeability reservoirs.
