

BAX® System

PCR Assay for *Cronobacter* (*E. sakazakii* spp.)

Harmful pathogens like *Cronobacter* have no place in food and nutraceutical products, especially for products like infant formula that are intended for such a vulnerable consumer base. Traditional methods to detect these harmful pathogens can be labor intensive, subjective, and time consuming. The BAX® System PCR Assay for *Cronobacter* (*E. sakazakii*) overcomes these obstacles through rapid, DNA-based detection of these harmful pathogens that enable quick product release and confident decision making.

Features & Benefits:

- Clear yes-or-no results in less than 23 hours for environmental sponges
- Compatible with many other BAX® System assays for efficient processing
- Carefully designed primers target specific genetic sequences possessed only by the target organisms
- Validated to perform as well or better than standard reference methods
- Minimal components and simplified workflows to maximize efficiency and ease-of-use
- Internal controls included in every test to validate results even in absence of target

Validations, Certifications and Approvals:

- **Health Canada MLFP-27**
Validated for dry dairy ingredients,
soy ingredients, environmentals-food production,
powdered infant formula

Hygiena Product Code	Legacy Order Code	Description	Quantity
KIT2001	D11801836	BAX® System PCR Assay for <i>Cronobacter</i> (<i>E. sakazakii</i>)	96 tests per kit

BAX® System Protocol

Enrich Samples.

Create rack file and warm up cycler.

Mix protease with lysis buffer and transfer 200 µL of mixture to cluster tubes.

Transfer 5 µL sample enrichment to cluster tubes.

Place samples on automated thermal block for lysis and cooling.

Transfer 50 µL of lysed sample to PCR tubes in cooling block.

Place sealed PCR tubes in cyclor and run program.

Review results.
