## WHY DO WE NEED A MANAGED CORPORATE TRAVEL PORTAL?

Travel portals provide a centralized location for travelers and travel managers to instantly access information about their program. The best portals offer single sign-on functionality and allow travel managers to easily make configurations and updates with information relevant to travelers. The portal should instantly connect travelers to the company's online booking tool and provide travel managers with access to technology such as reporting tools.

Portals should be designed to look good and be functional on any size screen to fit into today's mobile workforce. We recommend travel portals include the following features: profile information, unused tickets, information about upcoming trips, company travel policy and program updates, trip invoices and travel alerts.

Interested in incorporating a travel portal into your corporate travel program? Contact Travel and Transport to learn more about Dash Portal.
