

Improving Road Safety

Drivewyze Safety Notifications

As North America's largest commercial vehicle safety network, Drivewyze is on a mission to improve transportation safety and efficiency. Our vision is a transportation network with zero crashes and zero fatalities. The **Drivewyze Safety Notifications** service was built with this mission and vision in mind.

Developed in collaboration with local, state and national transportation and safety agencies, Drivewyze Safety Notifications warn drivers when approaching a designated critical location -- such as high-risk curves, low bridges, steep grades, high collision zones and more.

Drivewyze Safety Notifications are alerts delivered to drivers on their in-cab ELDs and telematics devices, and are unlike other any location based safety notification service. Drivewyze Safety Notifications have been mapped to carefully curated critical locations where drivers need to pay extra attention, and the alerts are always on -- displayed regardless of whether a driver is using a navigation application.

WHAT MAKES DRIVEWYZE SAFETY NOTIFICATIONS DIFFERENT?

Fully Integrated Alerts

Alerts are always displayed. Even when a driver is not using a navigation app.

Curated Locations

Critical event locations have been carefully curated by safety experts -- drivers receive alerts where they really matter

Drivewyze[®]

DRIVEWYZE SAFETY NOTIFICATIONS ARE A WIN-WIN-WIN

Drivers

Drivewyze Safety Notifications reduce the stress and risk of driving on unfamiliar roads.

Fleets

Get insight into driver behavior before and after the notification, helping to improve safety score.

Law Enforcement

Law Enforcement and state agencies benefit from an overall improvement in driving safety.

Proven to reduce driving speed & improve driving behavior.

Prevent high-cost collisions in high CMV-traffic areas.

Decrease risky driving behavior on difficult terrain.

Proven Safety Improvement Tool

Through partnership with fleet safety leader **J.B. Hunt Transportation, Inc.**, Drivewyze has tested and proven the effectiveness of safety notifications in changing driver behavior.

The results showed that even in the presence of physical road signs, in-cab driver notifications further reduced unsafe driving.

17% reduction in instances of speeding

Drivers get notifications at over **2,500** high-risk locations across North America.

RECEIVE SAFETY NOTIFICATIONS FOR ALL TYPES OF RISK ZONES

Rollover Zones

Steep Grades

High Collision Zones

Low Bridges

Runaway Ramps

and more.
